Health Service of the Canadian Medical Association

DANGER SIGNALS

We have, from time to time, drawn the attention of our readers to danger signals. There are certain conditions which, when they occur, should be taken as definite warning, and should send the person concerned to his doctor without delay. There is a very definite limit to the extent we may go in pointing out such danger signals, because there is a limit to what the lay person is able to see.

The trained engineer can learn from the action and the sound of his machinery whether or not it is running as it should. He will detect the slight changes which are the beginning of trouble and which the untrained person would neither see nor hear. The sailor foretells the weather, not by guess-work but by means of the knowledge acquired during years of observation. The physician prepares himself by a lengthy period of training in order that he may, first of all, acquire knowledge and secondly, the skill to put this knowledge into practice.

Most of the diseases from which mankind suffers are not of the sudden, acute type; the majority of them are gradually developed over a considerable period of time. In most cases, their presence is not suspected until there is some symptom which sends the sufferer to his doctor for examination. That symptom was a danger signal which the patient recognized. There were, however, before that, danger signals which the physician, had he been given the opportunity of examining the patient, would have recognized by reason of his special training and skill.

The Periodic Health Examination, which means that regularly, once a year, the individual goes to his doctor for a complete examination, provides the most practical means of which we know to detect these early danger signals. Periodic Health Examination brings medical skill to act when it has the most to offer. Early treatment is the greatest advantage that curative medicine has to offer, because early treatment will mean, in most cases, cure, or at least no further damage. If one relies on his own skill to decide as to the need of medical care, this may mean, in many cases, advanced disease with no hope of cure, and a life-long disability.

The periodic health examination should be made by the family physician.

Questions concerning Health, addressed to the Canadian Medical Association, 184 College St., Toronto, will be answered personally by correspondence.

VETERANS' SPORTS

The sports' day, held under the auspices of the local branch of the Canadian Legion on Monday last, proved what they were expected to be, a red letter day in Delia, and a big success in every way, of which the veterans may well feel proud.

The proceedings were scheduled to commence at 11 a.m., and long before this hour visitors began to arrive by auto and other conveyances, and during the afternoon there must have been close to 1,200 people on the grounds. Cars of all makes were numerous.

Many came from long distances, as well as from neighboring towns, while numerous farmers with their wives and families from the surrounding districts patronized the sports, notwithstanding the threatening rain which had been expected to fall for two or three days previously. Except for a light shower that fell about three o'clock the day was one to be enjoyed, the temperature resting at a favorable point. There was nothing that happened to mar the pleasures of the day, and everything went off splendidly.

The committee in charge of the sports worked indefatigably to get everything in readiness for the occasion, together with renovating around the baseball diamond with new wire, and having those parts of the grounds allotted to the various events roped off and picarded. There were side attractions in charge of Messrs. Anton Anderson, Bob Armstrong, and Percy Gates doing a good business, while the refreshment booth in charge of the ladies was so successful that it ran out of stock several times, not to speak of bread, etc., but many other necessary articles. Much thanks are due to Mrs. Bares, Mrs. Speelman, Mrs. Allen, Mrs. McCully, Mrs. Richardson, Mrs. Brunner, and a host of others for the way they worked to make their part in the success a success. The impersonation of policeman by Bob Selkirk, dressed in uniform, with conspicuous red nose and truncheon, which at times he wielded with telling effect, created much amusement.

Among the prize-winners in the different events, the following were successful:—

In the Softball Games, Hanna Girls won from Morrin, while Delia girls won from Hanna. Craigmyle team, we understand, failed to show up.

Baseball—Delia vs. Craigmyle—Delia, 10, Craigmyle 6. Rowley vs. Morrin—Rowley won. In the finals Rowley beat Delia by a score of 12 5.

Best decorated car—1st, Mrs. Art Carson; 2nd, E. H. Gallagher; 3rd, F. Brocklebank.

In the Horseshoe competition there were 24 entries in all—F. L. McFadden and H. Weech were first in the finals, while J. Porter came out second.

The Tug-of-war proved very exciting, Farrell Lake beat Starland, and Poland's team from the Hand Hills, won from Craigmyle. Poland's team got a bye, Delia vs. Farrell Lake—Delia won. In the finals—Delia vs. Poland's team of the Hand Hills—Delia won first money.

75 yards dash for ladies—1st Mrs. Hosley; 2nd, Mrs. Henry Almond; 3rd, Mrs. E. Sprouse.

In the Magpie Competition there were about 30 entries. Mrs E. Sprouse made the straightest and seemingly best throw of any. The winner, although she may have thrown the farthest, threw into the crowd, and should have been ruled out on a foul. The competitors were as follows—Mrs. Gilbrie (sen), Mrs. E. Sprouse, Mrs. Edwards Mrs. R. Gilbrie, Mrs. E. V. Springetti, Mrs. Hunley, Mrs Atkinson, Miss McKay, Mrs. Flora, Mrs. Sloan, Mrs. Sivinsky, Mrs. Alcott, Mrs. McFadden, Mrs. J. Beaton, Mrs. Hatch, Mrs. Stonese, Miss Robertson, Mrs. Dmytruk, Mrs. J. Wilson, Mrs. Dahl, Mrs. Thompson, Mrs. Hicks, Mrs. Venables, Miss Deshaune, Miss Hawthorne, Mrs. Dunbar, Mrs. McGivern, Mrs. Annie Martin, and Mrs. Ross.

Winners—Mrs. Hunley, first; Miss Hawthorne, second.

Egg and Spoon Race (50 yards), for ladies married or single—1st, Mrs. Gilbrie; 2nd, Mrs. J. Wilson.

Thread and Needle Race—1st, Mrs. H. Almond; 2nd, Mrs. Hunley.

100 yards dash—1st, R. Benedict, Hanna; 2nd, Leo Howarth.

Slow Car Race—There were about a dozen entries. These were run off in heats, and in the finals were Messrs. Larson, Len Howarth, and Olin McKee, Stanley Larson won first, and Olin McKee second.

Hop, Step and Jump—1st, E. V. Springhetti, 2nd, Leo Howard.

Broad Jump—1st, Howarth; 2nd, Hanna; Polasc and Springhetti.

Heaviest couple on grounds—1st, Mr. and Mrs. Bob Armstrong; 2nd, Mr. and Mrs. Fred McFadden.

Lazy Stick Pull—1st, Bill Lawrence; 2nd, H. Nixon.

In the nogeby Race R. Haselman, of Hanna, won first.

There were lots of track events for the children, and numerous prizes for all.

The picture show and dance at night, needless to say, were well patronized. The large dance hall was crowded to capacity, and dancing proved almost impossible, which lasted until about 3 a.m., everyone going home throughly tired, but pleased with the whole proceedings inaugurated by the local branch of the Canadian Legion.

STONELAW NEWS

Fred Reeves has got blood poison in his hand

Mr. and Mrs. Ed Trickel, and Mr. and Mrs. A. Stoneland, and Allen and Fred and Willie Reeves, attended the sports in Delia on Monday. They came from the Gopher Head and Wolf Hill districts.

Mr. Tom Hess got injured last week.

Mr. and Mrs. J. McAravey, and Mr. and Mrs. S. Swerdahl and children, visited Mr. and Mrs. Ed. Trickel on May 31st.

The ball game at Stonelaw was well attended on May 26th.

Mrs. M. Keith is home after eight weeks in Hanna hospital, and we are glad to hear she is doing nicely.

Jake Kesst has purchased a car

Mrs. F. Slater spent the week-end with her children at Gopher Head.

Mrs. Fred Curvin is visiting her parents, Mr. and Mrs. Christianson.

Mr. and Mrs. J. McKee and children, from Craigmyle, attended the Delia Sports.

Card of Thanks

Mr. and Mrs. Henry Moore wish to thank the many friends and neighbors who so willingly assisted in putting out the fire which occurred on Tuesday morning.

Daniel the Prophet

Nebuchadnezzar's insanity and restoration is the subject for next Sunday morning. We can learn a lesson for the last days from this incident. Come and get acquainted with the great King. You are cordially invited to our service at 12 noon in the Baptist Church.

A Great Car for Women to Drive

Ford

The Ford car is a great car for women to drive not only because it is so smart and good looking, but also because of its comfort, ease of control, and reliability. Especially its reliability.

You know the Ford will take you there and bring you back. You know you can depend on it. You know it has been built to give you thousands of miles of faithful, uninterrupted service. This freedom from trouble—this mental comfort—means a great deal to every woman who drives a car.

Another feature of the Ford that appeals to women is the safety afforded by the fully enclosed efficient six-brake system, steel body, and shatterproof glass windshield.

You can see the value of this when you consider that 65% of automobile injuries are caused by flying glass. The windshield of the Ford will not shatter under the hardest impact.

A demonstration drive is convincing.

The Charter of Anglo-Saxon Liberties

When King John, of England, placed his seal upon that historic document Magna Charta, on June 15, 1215, the date went into history as that of the "greatest of all events in the political development of modern freedom."

Nearly 700 years after the signing of the Great Charter of Liberty, a movement which had its inception in the United States gave birth to the International Magna Charta Day Association, with headquarters at St. Paul, Minn. The main objective of this organization is to have June 15 of each year observed as "Magna Charta Day," or "Inter-Dependence Day," in all the English-speaking nations of the world.

Observance of the day and of the charter which is the common heritage of these English-speaking nations is urged by the Association as an expression of the recognition of the common tie that binds these nations and the common debt they owe to those responsible for the Great Charter which is the foundation of modern ideals of liberty. The Association urges observance of the day also as a means of cementing the friendship and promoting mutual understanding between these nations which, speaking the same language, and having the same ideals, are acknowledged to be the greatest forces extant for permanent world peace. Magna Charta provides that basis of unity which these nations can commemorate. Its signing was an epoch-making incident in their common history—"Many centuries before the clash of opinion is possible. One American commentator says: "The yearly observance of Magna Charta Day not only helps to keep vibrant this Anglo-Saxon Inheritance of Great Will but it serves to set out in sharp relief a wholesome example to the wide world."

The alternative title, "Inter-Dependence Day" itself is an acknowledgment that American ideals of freedom have the same fundamental basis as those of the British Nations, including Canada, and it is interesting to note that since the Association first was formed the Day is proclaimed not only in the United States, Canada, Newfoundland, the British Isles, Australia, New Zealand and South Africa. That in the nations which trace their laws back to the historic document signed by King John by the Barons of England, join in remembrance of the freedom it has conferred upon all. Says J. W. Hamilton, Founder-Secretary of the Association: "More and more it has become the Inter-Dependence Day of the English-speaking countries, as men have come to understand the Inter-racial kindness in recognition indicates.

"The thought is American-born, a gesture of deference to the acknowledged fount of freedom, and a tender of goodwill to other English-speaking lands of the earth."

The Day is not observed as a legal holiday, but as one of remembrance. Teachers in the public schools, wherever the Day is observed, emphasize the significance of Magna Charta to their pupils, and explain its significance in the lives of all residents of English-speaking countries. In many places, too, it is supplemented by setting aside the nearest Sunday to June 15 as "Magna Charta Sunday" on which day John by the Bible or Sunday School lesson the goodwill which is the central feature of the observance of the Day is given prominence. It might as well be the basis of a valuable lesson in British history for the cosmopolitan people of Canada—and for that reason it is interesting to note that Canada as a nation has endorsed the idea of Magna Charta Day.

Briefly stated, Magna Charta established trial by jury, restrained the Crown from using lands and military power to money exactions, definitely placed control of taxation in the hands of the people, gave protection to minors and widows, established uniform weights and measures, limited fines and protected merchants, established the law of evidence, and, generally, assured the rights and freedom of the subject. These are the most important features of that charter which occupies so conspicuous a place in history and which established the supremacy of the law of England as the controlling power over the people.

The 39th article of the charter which is the basis of jury trial, declares "no man shall be taken, or imprisoned, or outlawed, or banished except by the lawful judgment of his peers." Another article is significant of the desire for justice for all. In it, the King declared: "To no one will we sell, to no one will we refuse or delay, right or justice."

May Revive Fibre Industry

New Machine For Scutching Fibre Said To Be a Success

A machine for scutching fibre flax and hemp recently demonstrated at the Canadian Government Experimental Farm, Ottawa, promises to do for these products what the cotton gin did for cotton. At present most flax and hemp fibre produced in Canada is separated from the wood by the hand method of braking, and scutching, the fibre thus produced of machines have been invented but none has done this work satisfactorily. The cost of the hand method has been so great as to retard the industry's development. This new machine, it seems, will do the work so well as it can be done by hand and perhaps better, according to experts who have seen it work. It is claimed that the invention, operated by a crew of five, will do the work of 150 men working with hand brakes and that it will help to revive the fibre industry in the Dominion.

Marble From the North

Northern Manitoba Stone To Be Used On Office Building In Montreal

Native marble, quarried in Northern Manitoba, along the Hudson Bay Railway, may soon replace marble from Italy. "Manivilla," as the Canadian product is called, is being used extensively in the construction of the new head office building of the Sun Life Assurance Company, Montreal. Shipments were recently sent from The Pas by the Canadian National Railways. The northern marble is of fine texture, hard but not unduly so, and can take a beautiful polish and a sharp arris.

Attacked By Asthma. The first fearful sensation is of suffocation, which soon by degrees becomes more desperate and hopeless. To such a condition of the invention, opens Dr. J. D. Kellogg's Asthma Remedy seems nothing less than miraculous. Its help is quickly apparent and soon the dreadful attack is subdued. The asthmatic who has found out the dependability of this sterling remedy will never be without it. It is sold everywhere.

One advantage of the flivver over the airplane is that when the flivver's engine stops, so does the flivver.

FLU Germs Breed In the Throat.

First Appear As A Common Cold, But Gain Tremendous Headway In Six Hours

SOME SIMPLE PRECAUTIONS AGAINST INFLUENZA

Simple precautions taken now will enable you to fight dreaded "Flu" which is sweeping rapidly through the whole country. The germs of influenza gain access to the body through the mouth and throat. Keep the throat healthy and you go a long way towards stopping the trouble. An effective means of prevention is to gargle the throat three or four times daily with Nerviline. Half a teaspoonful of Nerviline in water makes a most efficient gargle. The germ-killing properties of Nerviline quickly destroy any bacteria in the mouth or throat. If the throat is sore, if the throat is bourse, if you have a cough—be sure to rub the neck and chest with Nerviline. Every drop of it will rub in, and out will come the congestion.

Of course it is absolutely necessary to house-clean the system with Dr. Hamilton's Pills which stimulate the eliminating organs, and rid the system of disease-breeding germs. This combination treatment of Nerviline and Dr. Hamilton's Pills will give prompt and entirely satisfactory results.

Telephones In Canada

Dominion Is Served By 2,462 Separate Systems

There are 2,462 telephone systems in Canada. Five of these are government owned, Alberta having two, and Ontario, Manitoba and Saskatchewan one each. Municipal systems number 138, of which 123 are in Ontario. There are 496 private company systems, mainly in Ontario and Quebec, and 1,552 co-operative, of which 1,180 are in Saskatchewan. In addition, there are 160 private and 107 partnership systems. The number of telephones installed totalled 1,259,887, when a recent compilation was made, the estimated number of conversations made in one year totalled 2,108,400,000, including 31,400,000 long distance calls.

ST. VITUS DANCE

A Disease Of the Nerves Which Must Be Treated Through the Blood

St. Vitus dance is a disease of the nerves brought on by a morbid condition of the blood. It is a common disease with children, but sometimes attacks adults. The treatment of this trouble to be successful is through the blood, because rich, red blood is the life food of the nerves. In this way Dr. Williams' Pink Pills have proved beneficial in even the severest cases of this trouble, because they enrich the blood supply, thus carrying the necessary food to the nerves. In proof of the value of Dr. Williams' Pink Pills in cases of this kind we have the statement of Mrs. William Stead, Wiarton, Ont., who says:—"My eldest girl at the age of nine years suffered from an attack of whooping cough which left her very weak, and finally developed into a severe attack of St. Vitus dance. She was under a doctor's care, but with no beneficial results. We also tried other treatment, but with no better results. To make matters worse, she was taken down with measles, and the doctor was called in, as she became so weak, and her limbs so trembly that we had to take her about in a little hand wagon. I thought a change of air might prove helpful, so we sent her by boat to Port McNicol, a distance of about a hundred miles. She seemed to improve while there, but as soon as she came home her strength was gone again. I took her to another doctor, but with no better results. I was distracted with how helpless she was becoming, so decided to try Dr. Williams' Pink Pills a trial. I got six boxes, and by that time other doctors and other remedies had even started to do. They built her up completely; the St. Vitus dance disappeared, she has no sign of weakness and can run and play with other little girls, a thing she could not even try to do for months and months before. She walks to and from school, a distance of about a mile, which, of course, is helpful. I was distracted with how to praise Dr. Williams' Pink Pills enough, so always recommend them in all cases of weakness."

Sold by medicine dealers or by mail at 50c. a box from The Dr. Williams' Medicine Co., Brockville, Ont.

Paris Is Ambitious

Wants To Become Largest City In World

Paris has ambitions to be the world's largest city. It already is there is a Greater London, a Great New York and Greater Berlin, so Paris thinks the time is ripe that there should be a Greater Paris. The method by which this aim is to be realized is the same used by the other Greater Cities, the annexation of taking in suburban areas.

Parisian authorities hope to so enlarge the city that congestion will disappear and that there will be no crowding problem for the next fifty years. In their favorable argument for the annexation they point out that Paris can extend in any and all directions, for it is not so near the sea that it is always in line. After all the numerous suburban cities, towns and villages are included in the city, it is expected that the population will reach the ten million mark within ten years. Paris already is highly internationalized and it is expected that it will continue to attract many foreign nationalities.

At present the greater cities are ranked with these populations: London, 7,400,000; New York, 6,000,000; Berlin, 4,000,000; Paris, 2,000,000.—Edmonton Journal.

Praise For Canada

The Chicago Tribune says: "Canada is a land of agriculture and minerals and of fish and forests. When crops in the west no longer have the heavy surpluses of the present, Canada will expand again. It is a great continent, and as long as rains fall and the shiack earth of the glaciers and the black earth of the glaciers land where men will wish to live.

Wheat Acreage

It is estimated that nearly 25,000,000 acres will be sown to wheat in Canada this year. Last year we had 24,114,846 acres sown to wheat, and the total production was 553,571,000 bushels, an average of 22.1 bushels per acre.

Columbia Ice Fields

The melting waters from the Columbia ice-fields in Jasper National Park feed the sources of three of the largest and most historic rivers in the Canadian West—the Athabaska, the Saskatchewan, and the Columbia, which flow into three oceans.

Waterton Lakes Famous For Trout

Excellent fishing may be enjoyed in the National Parks of Canada, especially in the Waterton Lakes Park, Alberta, which, during 1920, saw the trout. Specimens of trout weighing as much as fifty pounds have been taken from Waterton Lakes.

When Holloway's Corn Remover is applied to a corn it kills the roots and the corn comes out without an injury to the flesh.

"What time is it, Maud?" boomed her father about midnight from the top of the stairs.

"Pretty soon isn't going."

"How about Fred?"

Going Upstairs Had to Sit Down Breath So Short

Mrs. H. Brousseau, Magog, Que., writes:—"For many years I suffered with shortness of breath; then four years ago I had palpitation of the heart, and was so bad I had to sit down two or three times when going upstairs. I read about

MILBURN'S HEART AND NERVE PILLS

so I got a box, and to me time I felt better, so I took three boxes more and I have never had shortness of breath since."

Price 50c. a box at all druggists and dealers, or mailed direct on receipt of price by The T. Milburn Co., Ltd., Toronto, Ont.

Wheat Pool Elevators

1608 Country Elevators To Be In Operation By End Of 1923

When the three provincial units of the Canadian Wheat Pool have completed their 1923 building program they will be operating a combined total of 1,608 country elevators with a capacity of 30,000 to 45,000 bushels each. Of this number, 1,055 will be in Saskatchewan, 390 in Alberta, and 163 in Manitoba.

Saskatchewan's program of 81 elevators will be made up of 27 to be erected at new points with a total capacity of 35,000 bushels, others to be built at 31 points with a 45,000 bushel capacity and 23 old houses to be torn down and rebuilt. The Saskatchewan Wheat Pool Construction Co., Ltd., a subsidiary of the wheat pool, was recently organized to take care of pool elevator construction and repair work.

In Alberta and Manitoba the construction will be mostly at new points, with 72 houses to be erected in the former province and 20 in the latter.

The Wheat Pool also operates 12 terminal elevators located at Fort William, Port Arthur, Vancouver, Prince Rupert, Winnipeg and Buffalo, N.Y., with a total capacity of 33,606,000 bushels. All these elevators have been built or acquired by the Pool since it began operating as a farmers' marketing organization in 1924.

Future Of the Dirigible

Development Assures Its Use For Long Commercial Purposes

What ever proves to be the cause of the Graf Zeppelin's engine failure, there is no occasion for forebodings about the future of the lighter-than-air ship. In a day when construction of air liners was experimental the R-34 crossed the Atlantic both ways without mishap, and Major Scott on the return trip to England. The Los Angeles made a successful voyage from Friedrichshafen to the United States, and has been in commission several years, having travelled all over the United States and visited the West Indies. The Graf Zeppelin had functioned so well that Dr. Nansen expected to use the airship on an ambitious trip to the North Pole in 1930. It was only the other day that the Graf Zeppelin made a protracted excursion over the Mediterranean and along the shores without a mishap of any kind.

The development of the dirigible as a means of transportation for commercial purposes. Invention has always to convince skeptics. In judging the airship at the time when installation of motive power was proposed for balloons the development has gone on steadily, and since the invention of the airplane rapidly and rapidly. The gas bag is still used but in elongated form and reinforced by metal inner structure.

Four Leading Items

The four leading items in the total agricultural production of Canada in 1928 valued in all at $1,730,304,000 are: Field crops, $1,099,781,000; dairy products, $250,000,000; farm animals killed for meat, poultry and eggs $106,654,000. Last year was the first year for poultry and eggs to exceed 100,000,000 in value. Since 1923 these have increased in value from $62,000,000. Value of farm animals in five years has advanced $72,000,000.

Always Ready and Reliable.—Practically all pains arising from inflammation can be removed with Dr. Thomas' Eclectric Oil. Simply rub it on the sore spot and it is quickly absorbed by the skin. Its healing power is confined to the affected tissue which is quickly soothed. This fine old remedy is also a specific for all manner of cuts, scratches, bruises and sprains. Keep a bottle handy always.

Peace River Crops

Crop conditions throughout the Peace River country are very promising at the present time and the season is somewhat more advanced than in more southerly sections of the province, according to authoritative reports. The movement of people into the Peace River country during the past year or two is being reflected in a considerable increase in the acreage under crop in 1929 as compared with last year.

Settlers For Alberta

Quite a few new settlers from the United States have arrived in the Tilley, Alta., district during the past two weeks and several families have also come into the Brooks area to take up farms in the Rainier district. The details in all cases are being arranged through the Canadian Pacific Ry. Department of Natural Resources.

Excuse Still Good

Office boy—"Id like a holiday this afternoon, sir. My grandmother is dead, sir."

Boss—"But didn't I give you an afternoon off a month ago because your grandmother was dead?"

Office Boy—"Yes, sir—she is still dead, sir."

Forest Products Rank High

Forest products in Canada rank second to those of agriculture with an annual value of approximately $500,000,000.

Use Minard's for the rub down.

Good Friend To Trappers

Radio Makes Life In Northern Wilds Less Lonely

The trapper's life in the wilds of northern and central British Columbia is not the lonely existance it used to be, for the radio is keeping the isolated cabin homes of these forest nomads closely in touch with the world's activities.

The radio has been a wonderful boon to the Canadian trapper and only the loneliest of them have not equipped themselves with radio sets. Indeed, owing to the distance to be covered and the various technical difficulties to be overcome to obtain satisfactory reception, most of them have bought powerful sets. No longer does the trapper find that nights are made for sleep alone. After following the trapline all day the modern trapper spends the evenings in his cabin smoking his pipe and listening to the news of the day and the orchestra broadcasts from hundreds of miles away.

Uniform Prize Ribbons

Uniformity In Color Is Agreed Upon For Fairs and Exhibitions

The Canadian National Exhibition, Toronto, has informed the Canadian Association of Exhibitions that it is willing to co-operate with the association's suggestions for uniformity of color in prize ribbon awards throughout Canada.

Hereafter at all fairs and exhibitions under the jurisdiction of the association first prize will be denoted by red, second by blue, third by white, fourth by yellow, fifth by green, and sixth by pink. Sweepstakes winners will be awarded the red, white and blue combination and the grand championship red and blue.

Much confusion has resulted in past years at fairs and exhibitions by the failure to adopt a standard system of colors with regard to awards.

Sore Corns Drop Off If You USE "Putnam's"

When you notice any sign of callous on the feet or toes—be quick times to paint on a few drops of PUTNAM'S CORN EXTRACTOR. Do this and you positively end the pain. No matter if the corn is hard or soft. Let it be on top or between the toes. Putnam's will remove it without pain. Insist on PUTNAM'S CORN EXTRACTOR. It does the work—and roots out the corn, quickly and without pain.

Forestry Truck To Tour B.C.

Under the direction of the Canadian Forestry Association, a lecture car will tour British Columbia this year. R. V. Ablett, official lecturer of the association, is in charge. The truck which is being used for the tour is equipped with a projection machine by means of which a series of 8,000 feet of film depicting the forest industry, and other industries of the province as well as important happenings in the province during the year, is shown.

Faith and Works Inseparable

'Twas an unhappy division that has been made between faith and works. Though in my intellect I may think them, just as in the mind's I know there is both light and heat, but yet put out the candle, and they are both gone; one remains not without the other. So 'tis betwixt faith and works.

Irrigation Cost Runs Into Millions

Construction cost of 10 major irrigation projects now operating in Southern Alberta amount to about $31,500,000, or an average cost of approximately $31 per acre for the area or slightly more than one million acres.

Extra MILES IN GUM-DIPPED TIRES

GUM-DIPPING which saturates every fibre and every strand of every cord with pure rubber, serves the same purpose as that of a cobbler waxing his thread . . . . prevents friction and multiplies strength.

This extra strength multiplies mileage, and increased mileage with no increase in price means lower cost per mile. That's why Firestone Tires give

MOST MILES PER DOLLAR

Discover New Building Stone

Material Found In Armenia Can Be Sawed and Nailed

Reports from Armenia tell of the discovery of a strange stone which, it is said, can be nailed like a piece of board, sawed with an ordinary saw and planed any color. This curious stone, which it is hoped will insure the economic independence of Armenia, has been found in great quantities in the vicinity of the little town of Artig and has in consequence come to be called in Armenia artig dufa.

The dufa is a light building material, but it is reported to be tough and able to withstand great strain. Heat and sound penetrate it very little and the material is being made to serve equally well as the walls of a building or as the furniture inside it.

Discharges of lava from Mount Aragats enfolded the deposits of dufa, which are estimated to amount to some 60,000,000 cubic meters. The discovery has aroused great interest in European scientific circles. The Armenian government, as a member of the Soviet Union, has sought the opinion of Moscow mineralogists as to the uses of the dufa. According to plans recently announced, the Soviet Governments are going to erect 5,000 buildings constructed of dufa as many of the principal cities of the union to advertise the stone.

Motion Pictures Of Northern Scenes

Arriving at The Pas, Captain Charles Sutton, pilot and party have completed an 8,000-mile aerial voyage which took them into the northern wilds, far beyond Fort Churchill. Motion pictures of the northern scenes and of the inhabitants, the Eskimos, were taken. This was the fifth objective of the journey.

Australia produces one-fifth of the world's supply of wool.

New Parliament In Britain Controlled By Lloyd George

London, Eng.—The Labor party has the largest group in the new parliament, but is short of a clear majority. Uncompleted returns with 18 seats still undecided, gave the standing as follows:

Labor, 287.
Conservatives, 251.
Liberals, 52.
Independents, 3.
Nationalists, 3.
Prohibitionists, 1.

The Conservatives, however, had rolled up the largest popular vote. The totals were:

Conservatives, 8,506,224.
Labor, 8,292,204.
Liberals, 4,178,379.
Independents, 251,448.
Communists, 50,614.
Total, 22,278,868.

Women candidates polled 745,107 votes.

London, England. — Commenting that the Liberals apparently held the balance in the next parliament, Right Hon. David Lloyd George, Liberal leader, said on his arrival in London:

"That is a very responsible position and we fully realize it, and you can depend on it we shall make no unfair use of it. A strict King's government must be carried on, and in the present state of the country it is essential that it should be steady.

"We shall certainly bear that in mind in any course we shall decide upon."

In some quarters a new general election next autumn was envisaged. In view of the deadlock ex ising. Although some Conservatives and Liberals spoke of a Conservative-Liberal coalition against Labor, during the campaign, it seemed more probable that the latter would unite towards the Labor party, if it inclines toward anybody, and perhaps on the same issues as 1923.

Several Liberals on the "left wing" of the party went over to Labor during the years since the 1924 election. Commander J. M. Kenworthy is a prominent example. Labor might draw enough support from this element in the Liberal party to govern with stability, in the opinion of some political observers.

HOLDS BALANCE OF POWER

Right Hon. David Lloyd George

American Boat Seized

Another Fishing Troller Is Held By Authorities At Pacific Port

Prince Rupert, B.C.—The United States salmon troller "Mary C. Fisher" has been brought into port here by the Canadian patrol boat Rhoda, after seizure off Tow Hill, Graham Island, for violation of Canadian fishing regulations.

Captain A. A. Fillion, of the salmon troller, claims he went to Tow Hill to make repairs as allowed under international agreement.

The seizure of the "Mary C. Fisher" follows a number of other seizures of U.S. salmon trollers recently. It is claimed that the boats are using Canadian waters for fishing under the guise of entering the waters for shelter, effecting repairs, or other valid reasons.

Migration Northward

Eighty Per Cent. Of Land Taken Up By Settlers Last Year Was In North

Ottawa.—Eighty per cent. of the 2,750,000 acres taken up by settlers in Canada last year was filed in such northerly districts as Prince Albert, Battleford, Peace River district and Grande Prairie, Hon. Charles Stewart, minister of interior, declared in his address here which was broadcast over a Dominion-wide Canadian National radio hook-up.

"The migration northward had been most pronounced in the Peace River region, where 4,000 homesteads were taken up last year, Mr. Stewart said.

In this district, he added, there were still available 40,000,000 acres of fertile land, capable of adding millions of dollars to the annual value of the Dominion's crops.

Want Chair Of Music

Saskatoon.—A discussion regarding the possibility of a chair of music at the various provincial Universities, was an outstanding item at the Inter-Provincial Musical Festival Conference, held here. The Conference, which was attended by officers and delegates from the associations of the four western provinces, expressed the hope that the authorities concerned would take early action.

Will Remain In Force

Victoria.—British Columbia's tax on non-equality paying exported logs, declared ultra vires by Chief Justice Aulay Morrison, of the Supreme Court, will remain in force until the judgment has been appealed by the provincial government as a result of arrangements reached between the province and the Dominion government, it was announced.

Mailing Checks For War Claims

Ottawa.—Those persons who suffered losses during the war and whose claims were approved by Commissioner Bagnall, will be sent cheques for the full amount on or about June 15. This was stated at the department of the secretary of state. Cheques mailed at that time will number about 1,000.

Fire Destroys Lumber Mill

New Westminster, B.C.—Fire of unknown origin destroyed the planing mill plant of the Brunette Lumber Company at Sapperton, near here, with an estimated loss of $100,000.

Plans Largest Airport

Sydney, Australia.—The largest airport in Australia will soon be established here on Marsh Island, to accommodate the planes to be used on the Melbourne-Sydney air passenger service.

Y.W.C.A. Convention

Toronto.—Many eastern delegates will attend the National Young Women's Christian Association convention at Banff, Alta., June 4 to 10. Many delegates will go from Montreal and Toronto.

W. N. U. 1788

Grain Buyers Organize

Will Function Along Lines Recommended By Grain Enquiry

Saskatoon, Sask.—Grain buyers of Western Canada have an organization under formation which will be known as the Grain Buyers' Service Bureau, it was announced here. It will be managed by an executive committee consisting of a number of active buyers in the West. The organization will function along the lines recommended by the Royal Grain Enquiry during the sittings in Saskatchewan last winter and is aimed to raise the standard of grain buyers considerably during the next few years.

An employment bureau will be handled in connection with the organization to assist its members in securing employment. At present the organization has a large membership in Saskatchewan, and by fall a 100 per cent. membership in Western Canada is expected. Further particulars of the body are under preparation and are expected to be completed within a few days.

Board Of Conciliation

Ottawa.—A board of conciliation under the Industrial Disputes Investigation Act has been established by Hon. Peter Heenan, minister of labor, to deal with a dispute between the Canadian National Railways and its firemen and engineers, members of the Brotherhood of Locomotive Firemen and Engineers.

Five Italian Fliers Killed

Rome. The crew of five of a military bombing plane were killed when it crashed into Mount Orsaro near Conegliano while on night flight. The dead were two lieutenants, two under-officers, and a soldier mechanic. A sudden violent storm blew up while they were flying over the Apenine mountains.

Will Be At Exhibition

Saskatoon.—Miss Ethel Catherwood, Saskatoon's Olympic champion, will give exhibition jumps at the horse performances in front of the Grand Stand at the Saskatoon Industrial Exhibition to be held July 2 to 27.

Mining Prospector Dead

Winnipeg.—Frederick W. McNeil, 47, for a score of years a mining prospector and promoter in Manitoba, is dead as a result of heart failure. He was discovered to have succumbed in his hotel room.

To Conduct Prosecution

Prince Rupert, B.C.—E. F. Jones of this city has received instructions from Ottawa to conduct in Vancouver the prosecution of the four United States salmon trollers seized recently at Goose Harbor.

Saskatchewan Men In Marathon Swim

Two Have Entered Names In Fourth Wrigley Event

Saskatoon, Sask.—Saskatoon will be entered in the fourth Wrigley swim marathon to be held in connection with the Toronto exhibition, on August 28. Saskatoon's entry in this world-famous event will be Jack Smyth, of 211 Sixth Street, who has already forwarded his entry to the officials at Toronto. Prince Albert will be represented in the same event by H. Houghton. Smyth and Houghton will train at Prince Albert National Park. They intend establishing training quarters there at once.

Capital Invested In Canada

Canadians Own Over Half Of Securities In Dominion

Ottawa.—Canadians own from 55 per cent. to 65 per cent. of the securities of all enterprises located on Canadian soil, British investment in Canada at the beginning of 1928 was two-thirds that of United States investments in this country, or $2,200,517,000, as compared with $3,285,786,000.

The total British and foreign investment in Canada at the time noted amounted to $5,742,045,000, the balance of $245,740,000 coming from alien countries other than the United States.

AGREEMENT IS REACHED ON REPARATIONS

Paris.—The German experts and their creditors came to an agreement on revised reparation annuities as proposed by Chairman Owen D. Young.

These annuities average 2,050,000,000 gold marks (about $492,000,000) for thirty-seven years; 1,700,000,000 marks ($408,000,00) for twenty-one years, and 900,000,000 marks (216,000,000) for the final year.

Under the agreement as concluded, these annuities will run from September next, instead of from April 1 last, as originally calculated. The Dawes plan of payments will meanwhile continue in force.

The situation was explained by Thos. W. Lamont, United States representative, as follows:

"Both creditor and German experts have heretofore declared themselves willing to accept the annuity figure of 2,500,000,000 marks as suggested by the chairman, although a difference existed on the question of interpretation.

"This difference has now been removed and a common basis for interpretation acceptable to both the creditors and to Germany has been found, subject, however, to agreement on the outstanding conditions which still remain for discussion and settlement."

He further explained this agreement was no one's victory, for both Germans and creditors gave way to make it possible.

The general opinion of the experts was that a most important step had been taken toward final elimination of the World War. There was no disposition to cry victory because there remained a number of knotty points among German conditions and allied reservations, any one of which if not satisfactorily disposed of might make final agreement impossible.

The Bull Dog Breed

Feet squarely planted on the deck of a Canada-bound liner, this young Britisher cgnsidly shrugs a left shoulder at the photographer. Member of an agricultural family coming forward under the auspices of the Department of Colonization and Development, Canadian Pacific Railway, he looks forward to a romping, healthy life in Canada—thanks to the Askew Scheme.

WILL PILOT GIANT DIRIGIBLE

Major G. H. Scott, chosen by the British government to pilot the great R-100 on its maiden voyage to Canada.

Working For World Peace

Saskatchewan Will Hold Provincial Conference On June 28, At Saskatoon

Saskatoon. — With a dominion peace conference as objective, provincial conferences are being organized, Saskatchewan joining in the movement by arranging a gathering at the University of Saskatchewan, on June 28. This was decided at a meeting called by Mrs. H. Johnston, president of the United Farm Women of Saskatchewan, and attended by representatives from all organizations in the province working for world peace. The date was chosen to accommodate the large number who will be in Saskatoon for rural women's conventions covering not only the province but the whole of the Dominion, represented in the Women's Institutes.

A Reciprocal Visit

Australians Invite Canadian Boys To Make Return Tour

Victoria.—"We are leaving Canada with the hope that a reciprocal visit to Australia will be arranged for Canadian boys," Major John J. Simons, leader of the Young Australia League, stated prior to embarking on the liner "Aorangi" homeward bound.

"We have had a wonderful tour, and its success has greatly exceeded our expectations," he added.

The aim of the League in fostering their tours, Major Simons said, was to create better understanding between he English-speaking peoples of the world, and in this, he thought, the League had been in a large measure successful.

Casualty List Heavy

Manila.—The death toll in the typhoon in Southern Leyte province was reported at 112 as communication with that section was re-established. First reports of the storm received here gave the number of deaths as ten. Some of the towns in the typhoon area still were isolated when the casualty list was completed.

Unemployed In Britain

London.—The number of unemployed in Great Britain on May 13 totalled 1,104,700 persons, a decrease of 28,005 under the previous week, was officially announced here. The number was also 12,800 below the unemployment figures of May 13, 1925.

Amended Bill Is Passed By Committee

Would Make Divorce Much Easier For Deserted Wives

Ottawa.—An amendment to the bill respecting the domicile of married women, although opposed by a large section of the house, passed when Parliament went into committee to consider the bill. The amendment makes it possible for a wife, deserted by her husband and left living alone for two years, to establish her domicile in a province of Canada in which a divorce court exists for the purpose of obtaining divorce.

The bill, as amended, passed the committee stage and now stands for third reading. The amendment was passed by a vote of 56 to 28.

During the debate, Hon. Ernest Lapointe, minister of justice, declared that conditions in Canada would be worse than in Reno if the bill as amended became law. In Reno, a person desiring to obtain a divorce was required to wait three months before taking proceedings. Under the bill before the house, such persons could go to a province where a divorce court existed and begin proceedings immediately.

Hon. R. B. Bennett, Conservative leader, pointed out that a woman wishing to obtain a divorce must establish her domicile to the satisfaction of the court.

Sewer Gas Explosion Causes Much Damage

One Person Believed Fatally Injured When Blast Rocks Ottawa

Ottawa.—Explosions of sewer gas which rocked the city's central presumably fatal injuries to one and hurt a number of others, at the same time destroying considerable property where the blasts were most severe.

There was panic in several sections when the first explosion occurred, accompanied by leaping pillars of flame and water, shook dwellings and rattled the windows of houses and office buildings, causing many to run screaming from their homes.

In the streets, man-hole covers were thrown into the air a height of 50 or 60 feet. Confusion reigned. Fire alarms brought apparatus to many fires, and patrol where there was likelihood of any outbreak.

St. Martin's Reformed Episcopal Church, built in 1876, and a landmark in the Sandy Hill district, was churned into wreckage as though it had been hurled by high explosives. Several stores in its vicinity were also destroyed, but persons in these latter buildings were not badly hurt.

Slaughter Of Tribesmen

2,000 Arabs Reported To Have Been Killed In Riffian War

London.—A Jerusalem dispatch to the Express says desert runners brought to Beyrout word that 2,000 Arabs were killed in Riffania, in the battle between Ajmann and Jelsawah tribes.

The fight was attributed to a breach of desert hospitality.

The sheik of Ajmann visited and was entertained by the sheik of Jelsawah, but it would be fair to the intent of his host than he was attacked.

The Ajmann tribesmen promptly retaliated and in the following conflicts both the chiefs and a thousand tribesmen on each side were reported to have been killed.

APPEAL IN TAX CASE IS WON BY WHEAT POOL

Ottawa.—Judgment was given by the exchequer court in favor of the Saskatchewan Wheat Producers, Limited, in their appeal from the assessments in the years 1924 and 1925, by the minister of national revenue, at $154,143 and $362,483 respectively.

These amounts represented deductions set aside for elevator and commercial reserves, and for operating expenses.

Mr. Justice Audette held that the deductions were merely temporary loans made by the farmers in the pool and were not gains or profits within the meaning of the act.

The judgment says in part:

"The deductions are so much less of the price, the proceeds of the farmer's grain, which he leaves, by agreement, in the hands of such associations for the purposes of handling his grain to his best advantage.

"Under all circumstances of the case, I find that the deductions in question are but temporary loans and advances made by the farmer out of the price of his grain, to the pool capable for carrying on and securing elevator facilities and capable of being credited to him as his own, having been his own all through under the true meaning of the provincial act and the contract made thereunder, and that the association acting in such fiduciary capacity for the grain growers, accounts for every cent it receives, and retains nothing that amounts to gain or profit."

Principles Involved In Election Act Amendments Explained In House

Work May Be Delayed

Forest Fires and Snow Interfering With Work On Bay Line

Ottawa.—Forest fires to the south and heavy snowstorms to the north have seriously interfered with the completion of the Hudson Bay Railway to Fort Churchill, with the result that it is now doubtful if he road can be completed this summer.

Hon. Charles Dunning, speaking of the situation, said that the fires and storms had delayed the work very considerably, in fact, a full month had been lost. This, however, would not have any effect upon the opening of the route, he intimated, as the railway was well in advance of the port development and the installation of aids to navigation in the strait. Every effort will be made to make up for the lost time and it is expected that rapid progress will be made in the next few months.

Many Press Delegates Going To Conference

Canada Is Sending Twenty To England Next Year

Montreal.—J. H. Woods, managing editor of the Calgary Herald, and chairman of the Canadian Division of the British Empire Press Union, accompanied by his wife, sailed from this port en route to London, England, where he will make arrangements for the Canadian contingent of press delegates to the Imperial Press Conference next year.

"Canada will be sending 20 delegates to represent the 60 members of the Union in Canada," said Mr. Woods. "This is the largest representation of any part of the Empire with the exception of the British Isles."

Heat takes Heavy Toll

United States Suffers Casualties From Atlantic To Rocky Mountains

Chicago, Ills. — Heat, summer storms and floods in widely separated parts of the United States has taken a toll of 31 lives.

From the Atlantic seaboard to the Rocky Mountains, the country was sweltering under a blanket of steam, which caused numerous prostrations. Many drownings were reported from regions where the sudden heat wave had driven people into lakes and rivers still chilled by a cold spring.

In Texas summer rains had sent streams out of their banks and seven persons were reported to have lost their lives in the flood waters.

Salmon Treaty Approved

Committee Evenly Divided and Chairman Voted In Favor

Ottawa.—On the casting vote of the chairman, William Duff, Liberal, Antigonish-Guysboro, the marine and fisheries committee of the House of Commons approved the treaty with United States sockeye salmon fisheries treaty. The convention was signed at Washington on March 27 last.

When the division was called, ten members of the committee voted against the pact and ten in favor, with the vote a tie, Mr. Duff, as chairman, then voted for the treaty.

Speeding Up Construction

Saskatoon, Sask. — Every effort will be made to have the Melfort-Aberdeen branch of the Canadian National Railways completed this fall, W. A. Kingsland, general manager of Western Lines, said when he passed through the city on his way to Rosetown. He stated grain would be hauled over the line this year even if more necessary to use skeleton tracks for small distances.

Crowds Make Merry On London Streets During Night Of Elections

London, England. — Hundreds of thousands of Londoners kept watch the small hours of the morning as the fatal figures shifted on hundreds of lofty screens and electric signs.

In Piccadilly Circus, Trafalgar Square and other famous centres of London, the jostling crowds took on a carnival appearance. Vendors of colored toy balloons did a brisk trade, men in evening clothes, while male celebrants waltzed along the pavements masquerading in women's coats and hats.

Tops of the buses were crowded with pelple out to see the spectacle and apparently careless of the fact that they were not getting anywhere in the tremendous traffic blockades. Lower Regent Street by midnight was jammed with buses fifty deep. It was estimated at least 30,000 persons had packed into Trafalgar Square, where a huge stereoscopic electric bulletin was mounted.

Party partisans even decorated the huge lions at the foot of Nelson's monument with their colors, but the police cleared them away.

In night clubs, restaurants and hotels throughout the fashionable West End thousands of London society folk danced the hours away intent to the early morning, while the election returns by radio broke to the music.

Premier Baldwin spent the evening more quietly at Number 10 Downing Street, his official residence, with with Mrs. Baldwin and a party of friends. He listened to the returns over the radio.

Principles Involved In Election Act Amendments Explained In House

Ottawa.—Hon. Lucien Cannon, solicitor-general of Canada, explained to the House of Commons the two principles involved in the amendments recommended by the special standing committee which, during the present session, has investigated the Dominion Elections Act. These amendments were before the House for approval.

The first radical change recommended by the committee was for the appointment of returning officers by the chief electoral officer for the Dominion. In the past returning officers all across Canada had been appointed by the governor-general-in-council at the recommendation of the secretary of state.

The second principle requiring change, according o the recommendations, was in the compilation of federal voters' lists from provincial lists. The recommendations contained in the amendment urged that in urban centers enumerators be appointed to compile permanent federal lists. This practice will save much expense and trouble and will enable inaccuracies to be eradicated, the committee agreed, Mr. Cannon pointed out.

It was the hope of the committee, Mr. Cannon said, that the amendments migh be passed during this present session since they would require some time to be put in practical use. The bill was given second reading forthwith and considered in detail in committee.

Mr Cannon pointed out that the amendments provided for in the bill would apply at the next general election. It was the desire of the committee that they should not apply at any by-election which might be held before the next general election.

His Majesty Suffers Relapse

Public Is Worried Over News Regarding Condition Of King George

London, England.—Somewhat assuring news as to the condition of King George, who was reported to be again confined to bed and suffering from an attack of fever, was obtained by the World at noon.

The shock caused by the news that His Majesty had suffered a relapse, was two-fold. This came first from the unexpectedness, and, most of his subjects thought their ruler normally convalescent, and, second, from the gravity of the King's malady. Empyema is considered a dangerous disease, particularly apt to strike a sudden mortal blow.

Very few persons knew that His Majesty had suffered a relapse. The fact was not public in London and the vivid pictures in general editions had distracted and absorbed the attention of every one in England.

To Cross Continent In Buggy

Stockbridge, Mass.—Russell Beckwith has no use for automobiles, so he will set out on a trip with a horse and buggy that will eventually take him to British Columbia. Mr. Beckwith has leased his farm here and leaves to visit a brother in Connecticut. He also will go to Pennsylvania for a visit before heading for British Columbia.

Rebels Kill Ambassador

Constantinople. — Authoritative information has reached Angora from Afghanistan, stating that Afghan rebels captured and killed Gublam Djelani Hey, Afghan ambassador to Turkey who was recalled by former King Amanullah to aid in the fight against the rebels. The report said that Gublam was tortured to death.

Estimates Approved

Ottawa.—After a somewhat tempestuous passage, all estimates of the department of immigration have been finally approved by the supply committee of the House of Commons.

Home Life Of Western Canada

Great Improvement Is Shown Within Recent Years

The progress of the Indians on reserves in the three Prairie Provinces towards a position of self-support and independence is one of the gratifying features of the work of the Department of Indian Affairs. In farming and cattle raising these wards of the Government have, during recent years, scored conspicuous successes and the prosperous conditions prevailing on western reserves are reflected in the improved mode of living. New houses are springing up on all the reserves at the annual rate of from 250 to 400. These are of log and frame construction with at least six windows providing ample light and ventilation. Well kept gardens are laid out near many of these homes while milch cows, flocks of poultry, and pigs are not uncommon sights in the barnyards.

The improvement in home life on the reserves is due in a large measure to the training received by the young Indian women in the industrial schools maintained by the Department, in these they learn, among other things, the principles of domestic science and hygiene. At one time it was a difficult matter to make the Indians realize the value of milk as a food for themselves and their children, and to get them to milk their cows. However, a gradual change has taken place in their attitude. An increasing number of cows are being milked and milk, cream, and butter are in use in Indian homes. The development of gardening is another gratifying feature of the Indians' progress and last year nearly 350 acres were sown to vegetables.

In the matter of hygiene, the Department of Indian Affairs makes every effort to encourage good practice. Whenever the wives and mothers are school graduates, the value of sanitary conditions is fully realized, and among the older Indian women the work of the traveling nurses and field matrons is gradually bearing fruit. Four travelling nurses are constantly on the road visiting Indian homes on the various reserves in the West, instructing the women how to live and how to care for their children. This service is supplemented by the work of a staff of field matrons who make frequent visits in a friendly spirit and assistance needed by the native women.

The care of the aged is also a part of the responsibility of the Department, aged officers on the reserves provide food, clothing, and homes for indigent members of the bands. During the last three years the policy of the Department has been to encourage as many old Indians as possible to live in teepees during the summer, the teepees are usually large and well ventilated and the old Indians are greatly benefited in health by this practice of living in these airy, summer habitations.

Says Earth's Interior Sea Of Liquid Glass

Geologist Puts Temperature Over 50,000 Degrees Centigrade

Now comes Professor Daly, of Harvard, geologist, and tells the world that the interior of the earth "is a sea of dense liquid glass," hotter in the infernal regions under a pressure of 50,000,000 pounds to the square inch. To be exact he puts the temperature down there at more than 50,000 degrees centigrade. He says the earth's crust is "more than 40 miles deep." Under this is granitic top of basalt, and yet lower is some material not unlike the metallic iron found in meteorites. Then comes the liquid glass from centre of the earth to one-half its radius. If ever that force loses under the pressure there'll be the greatest spurt from the world's surface on record.

Canada's Air Mail Grows

A record of increase shows that up to April 30, 1929, a total of 416,852 pounds of mail have been carried by aeroplane in Canada. In the West, over the Winnipeg-Regina, Calgary-Edmonton route some 4,820 pounds have been carried. Even the north has had its share for in the Mackenzie River district, up until March 15 of this year, 4,914 pounds were carried.

Heaven "helps those who help others to help themselves."

"Dear, come down and don't keep moaning up there."

"I'm not moaning. I am only reciting that I didn't pay the car licence."—Fliegrade Blaetter, Munich.

A Destructive Disease Of the Potato

Black Leg One Of the Worst Diseases Grower Has To Contend With

One of the worst diseases to which potatoes are subject is known as "black leg," which not only reduces the yield by injuring the plant before they produce tubers, but also causes the soft rot of the affected surviving crop. The first appearance of this disease is the dark and yellowing and stunted appearance of the vines. In some cases the vines do not even reach this stage as the sprouts are destroyed before they reach the surface of the ground. Affected plants may appear early in July and continue to make their appearance until late in August. Diseased plants are somewhat stunted and quite conspicuous, even at a distance by their sickly appearance. In severe cases the upper leaves may assume somewhat of a metallic hue. Affected plants usually die with a rolling upwards of the margins of the leaflets. The disease is described in a bulletin, pamphlet 95, of the Department of Agriculture, at Ottawa, written by D. J. MacLead, pathologist at the Fredericton, New Brunswick, laboratory of the Dominion Division of Botany of the Experimental farms. According to this authority infection may take place late in the season and may not be noticed along with healthy stock. Careful inspection, however, at this time may show the characteristic dark rot of the stem, particularly at the stem end, which has received the infection from the decaying stalk to which it was attached. The decay associated with diseases if of the soft rot type in which the colour of affected tissues ranges from nearly normal to brown and black. The disease spread in the bin as the season advances. Measures that may be used to control the disease at planting time are given in the pamphlet. A matter of first importance is to use healthy seed nowhere known as certified crop, and those who have had their seed inspected when growing in the fields and in storage. Should examination of the seed from other sources, one may detect evidence of decay or discolouration. When cutting seed of uncertain origin, it is well to sterilize the cutting knife by dipping it in a solution of formalin after it has been used on a diseased looking tuber. The proper solution is an ounce of formalin to a gallon of water. If the tubers are immersed in this solution for two hours it affords a dependable guard. The proper strength is given as one pint of formalin to thirty gallons of water. Tubers should be done very shortly before the seed is to be planted. Planting early while the soil is still cool is also helpful and also said to favour the success. When the crop is growing in the field it is recommended to go through the crop from time to time and to remove completely the vines and tubers of the plants that show a downward appearance.

The "Old Man River"

Name Of Picturesque Stream In Southern Alberta May Be Perpetuated In Song

The prediction is made by a member of the Metropolitan Opera Company that the Old Man River will have a permanent place among American folk songs. That is not difficult to believe as it has been repeatedly from the first that it had a quality quite unusual for a musical comedy number. Though "Show Boat" is distinctively a product of this continent, its popularity has been even greater in England than in the United States. Its appeal there was due almost wholly to this song.

The fascination of the Mississippi that its expresses has been exercised by many other rivers in all parts of the world and those who never saw the "father of waters" are unable to enter into the feeling that inspired the composition. A magazine writer tells of many streams to which it applies. Among those have mentioned that Alberta has one that from the earliest days has gone under the name of "Old Man River." It runs practically due south of the province and joins the flow to form the South Saskatchewan. Was it christened by some member of the Indian race or settlement similar to that behind the song.

—Edmonton Journal.

An All-Night Session

"Yesterday," said Judson, "I refused a poor woman a request for a small sum of money, and in consequence of my act I passed a sleepless night. The tones of her voice kept ringing in my ears the whole time."

"Your softness of heart does you credit," said Mabson. "Who was the woman?"

"My wife."

Pendulum Observations

Pendulum observations by the Dominion Observatory show that the mountains of British Columbia are buoyed up by abnormally light material extending down into the earth's crust for about sixty miles. The excess of gravity revealed by the pendulum on the prairies is believed to be due to an extensive underground ridge of abnormally heavy rock.

There is no place like the home of a young man's busy past.

Summer Fallow Substitutes In Saskatchewan

No Substitutes Have Yet Been Found To Equal Fallow System

The summer fallow continues to provide the best preparation for a full crop of wheat in Southwestern Saskatchewan. At the Swift Current Experimental Station, various fallow substitutes have been tried but none have equalled the fallow system. Of the various substitutes crops used, potatoes and corn were the best. Wheat following these crops has been about 5 bushels per acre less than Swift Current Station than on fallow. When cereals in rows were substituted for fallow the result has been a wheat yield in the next year about equal to the yields secured from spring ploughed wheat stubble. The superintendent of the station observes in his report for last year published by the Department of Agriculture, at Ottawa, that it would appear that cereals may be grown in rotation under use much culture to about the same extent as ordinary seeding of the same cereal. Another point of considerable importance is that it has been found impossible, without hand labour, to keep row crops free of weeds, thus fully bearing out the advantage of a clean fallow in destroying weeds. Since potatoes and corn cannot be grown on any large acreage for economic reasons the conclusion is reached and stated in the report that any considerable substitution of row crops for fallow is not sound practice for southwestern Saskatchewan, at the present time.

Success With Buffalo

Herds Continue To Multiply In the Various Parks

A gratifying feature of Canada's adventure in bringing back the buffalo is the way in which the different herds continue to multiply and to expand beyond the parks capacity of their once extensive ranges. The case of the main herd at Wainwright, Alberta, in which there was an increase from about 700 head to 17,000 head has often been cited. In the herd of the Isle Island Park, about 200 were slaughtered and their carcasses and hides disposed of to relieve the growing congestion there.

The buffalo in Buffalo National Park, at Wainwright, Alberta, are not disposed to be sociable and visitors are warned against any efforts towards making friends. Only one buffalo in the park permits intimacy. This is "Ollie" a splendid young bull, who has become accustomed to being fed oats out of a small black pail and will now approach the moment he sees this object.

Railway Construction

One of the most optimistic signs in Canada today is the energy being displayed by both the Canadian Pacific and Canadian National Railways towards getting out and expanding their services. Each company looks forward to a busy season and hundreds of miles of new track are to be started. Particularly in the West is there intense activity. Not only does this centre around the Hudson Bay route, but both lines are making plans to give better service to the mines and the farms.

"My hardest proposition isn't earning my keep."

"No?"

"It's keeping what I earn."

Switzerland a Busy Country

Can Hold Its Own With More Favored Competitors

Switzerland, the great holiday resort of Europe, is a small land-locked country, without direct access to the sea, and cannot be compared with its larger neighbors in regard to the scale of its particular problems or its method of handling them. But it has shown remarkable genius in the way of centralizing and concentrating its industries, and in devising ways and means of overcoming its commercial handicaps. The Swiss can hold their own with their more favored competitors in most lines of big business they undertake to tackle, and the Canadian Trade Commissioner, in a report published in the Canadian Intelligence Journal, points out that Switzerland conducts business on a large scale and has many highly capitalized corporations.

In 1926, the average dividends paid by 462 manufacturing companies was 9.04 per cent., while during the same year the average for all undertakings was slightly in excess of 6 per cent. The high bluff policy which most countries adopted after the war caused a certain amount of panic in Swiss industry abroad and many branch factories are now operating in Switzerland. The domestic market is small and restricted, and hence the bulk of the manufactures must be exported.

The secret of industrial success in Switzerland lies in the fact that the tendency is towards a high degree of specialization, backed by well-paid and highly skilled and intelligent labor. The chief industries are textile, silk manufacturing, cotton spinning, engineering, machinery and metal industry, chemical and dye industry, and the watch making industry, and the people are thrifty, industrious, painstaking and clever.

Achieve True Success

Those Who Leave World Better Than They Found It

He has achieved success who has lived well, laughed often and loved much; who has gained the respect of intelligent men and the love of little children; who has fitted his niche and accomplished his task; who has left the world better than he found it, whether by an improved poppy, a perfect poem, or a rescued soul; who has never lacked appreciation of earth's beauty or failed to express it; who has always looked for the best in others and given the best he had; whose life was an inspiration, whose memory is a benediction.

Specific Orders

Father and boy in the habit of warning his little daughter regarding her conduct as he left home.

One morning he kissed the child and said:

"Now be a good little girl."

With an expectant smile, she added:

"And don't what?"

An Appropriate Name

Tillie (to young man passing by): "Hello, John!"

Millie: "Is his name John? Your father told me it was Mike."

"Oh, no, father just calls him that because he always trips over him at our front gate."

Decline Of Aristocracy

Now Largely Bult a Memory Of a Decorative Past

One startling change in the government of Europe and decline of those men whose claims to power and position are based on heredity, Generation after generation, the same families supplied the nation's rulers in government and society. Men were born to power as others were born to unimportance. Nor is the record of such a system lacking in splendor or achievement. It was a comfortable world for the well-born and wealthy, and the change part of it is that so much good should have emerged from a social code based on the whims of birth.

Today, however, the hereditary aristocrat is nothing much more than a pleasant reminder of a decorative past. The mere possession of his heavily taxed country house he looks out toward the hurrying, noisy stream of life like one of those Egyptian mummies in a museum, behind the medical profession a weapon of certain deadliness against diphtheria. "Toxoid" is administered in three hypodermic injections of 5 drops each, at intervals of a month. This agent thus administered renders the subject immune to the disease for from 12 to 15 years and probably for life.

By the Schick Test it has been determined that 15 per cent of all infants under 2 months are susceptible to diphtheria, 30 per cent between 2 and 6 months, 60 per cent from 6 months and in the 1st year, 80 per cent from one year to two years, 60 per cent from two to three years. From that age onwards the percentage decreases until at the age of 20 only 15 per cent are susceptible.

Of thousands of toxoid administrations in Toronto no school children none hase resulted harmfully.

According to statistics compiled by the Canadian Social Hygiene Council **1,000 people died in Canada last** year from diphtheria while 13,500 people were infected. Under modern conditions and in the face of the latest scientific discoveries both deaths and sickness from diphtheria can in future be avoided.

"It is important," Dr. Hastings says, "diphtheria is still one of the most deadly enemies of children, especially between the ages of one and five. From 50 to 75 per cent. of all diphtheria deaths occur in children less than five years old. This is the pre-school age, before they come under the observation of departments of health in an organized way, and it is at the age that parents are most frequently deceived by the insidious onset of the disease; they frequently think the child has only caught a cold in the head until it has progressed too far to be cured."

Three Historical Valleys

Are Situated In Southern Part Of Saskatchewan

In the southern portion of Saskatchewan there are three outstanding valleys, the Saskatchewan Valley, the Qu'Appelle Valley, and the Moose Jaw Valley. All have historic and romantic associations, the Saskatchewan Valley is associated with Le Vercndrie, the Qu'Appelle Valley with the Cree and the Saulteux Indians, and further with the black robed form of Pere Hugouard. The Moose Jaw Valley is conspicuously historic because of its associations with the buffalo and the Sioux Indians.

In the early 70's because of its nearness to the American border, and because of its luxuriant growths of vegetation and many watered places, the buffalo in the Dakotas and Montana were driven by famine to make the valley an annual rendezvous. The Indian hunted the buffalo in the Moose Jaw Valley through the years, the nearest white settler being Le Gare, then with his trading post near Wood Mountain. For many years the Indians used the valley as a hunting ground, and drifting to Le Gare's country, as the settlers came to the prairie.

The Parts He Wanted

Young Man—"When I bought a motor-bike from you a few weeks ago you said if any thing broke within six months you would supply a new part free."

Salesman—"Certainly, sir. What may I have the pleasure of providing for you?"

Young Man—"Well, I want four front teeth."

Welsh Miners Coming To Canada

More than 1,000 Welsh miners will soon sail from Bristol for Ontario, under the direction of the provincial department of colonization. Hon. John S. Martin, minister of colonization, announces. "The men will be placed on farms as soon as they arrive here," he said. "We have plenty of room for them."

Sudbury Nickel Ores

The nickel produced in Canada comes almost entirely from the huge deposits of nickel-bearing pyrrhotite-chalcopyrite ores found in the Sudbury district of Ontario.

Thomas Lipton Patronizes Stampede

For a week in July of each year the entire populace of Calgary, casts off its conventional modern clothing and dons chaps and 10-gallon hats in honor of the Calgary Exhibition and Stampede, a relic of the Last Great West and one of the finest exhibitions of horsemanship in the world. This year's Calgary Stampede will be held July 8-13, inclusive, and Guy Weadick, its manager, well known impresario of the Canadian West, has announced that it will be "bigger and better" than ever. The attendance at the Stampede has increased by leaps and bounds ever since its inception in 1912, when it was witnessed by a few inquisitive thousands, for by 1922 it had reached the 100,000 mark; it had doubled that by 1925, and 1928 saw 230,000 people cheering and revelling in this exhibition of the prowess of the plainsman.

Several world-celebrated personages will donate prizes for the major cowboy contests in 1929, among them being the Prince of Wales, E. W. Beatty, President of the Canadian Pacific Railway, and Sir Thomas Lipton, British yachtsman and sporting enthusiast.

The various events scheduled include bronco-busting, steer decorating (once known as bull-dogging), calf-roping, bull-dogging, wild horse and chuck-wagon races, wild cow milking contests and races in which buck Indians and squaws demonstrate that the red man has lost neither speed nor stamina with the depletion of the numerical strength of his tribe. The Indians camp at Victoria Park, Calgary, and are a picturesque phase of a really remarkable exhibition. During the 1927 show a buxom squaw, dutifully engaged in house-work in her brave's teepee, was informed that the square race in which she was to participate was the next on the program. Rushing from her tepee, an apron tied round her waist, she jumped astride an Indian cayuse and won first prize her apron whipping behind her in the breeze.

Victory Over Diphtheria

Dread Disease Could Be Absolutely Stamped Out Of Canada In Two Years

The lives of 1,200 Canadians mostly children are wantonly sacrificed yearly to the dread disease diphtheria, declared Dr. Charles J. Hastings, Medical Health Officer for Toronto, in a health bulletin issued recently.

"A case of diphtheria occurring in any community or municipality is a reflection on the department of health, the medical profession, and the citizens," declares Dr. Hastings. "Every death from diphtheria should be looked upon as due to culpable negligence."

By close co-operation of citizens with their family physicians and the various departments of public health, Canada could be absolutely stamped out of Canada within the next two years.

Immunization is the method recommended by Dr. Hastings to drive the disease from this country. The discovery of the Schick Test, by which it may be finally determined who is and who is not susceptible to diphtheria attacks, was the final victory over the disease.

Before the development of the Schick Test the discovery of the immunizing solution, "toxoid," put into the hands of the medical profession a weapon of certain deadliness against diphtheria. "Toxoid" is administered in three hypodermic injections of 5 drops each, at intervals of a month. This agent thus administered renders the subject immune to the disease for from 12 to 15 years and probably for life.

By the Schick Test it has been determined that 15 per cent of all infants under 2 months are susceptible to diphtheria, 30 per cent between 2 and 6 months, 60 per cent from 6 months and in the 1st year, 80 per cent from one year to two years, 60 per cent from two to three years. From that age onwards the percentage decreases until at the age of 20 only 15 per cent are susceptible.

Of thousands of toxoid administrations in Toronto no school children none hase resulted harmfully.

According to statistics compiled by the Canadian Social Hygiene Council **1,000 people died in Canada last** year from diphtheria while 13,500 people were infected. Under modern conditions and in the face of the latest scientific discoveries both deaths and sickness from diphtheria can in future be avoided.

"It is important," Dr. Hastings says, "diphtheria is still one of the most deadly enemies of children, especially between the ages of one and five. From 50 to 75 per cent. of all diphtheria deaths occur in children less than five years old. This is the pre-school age, before they come under the observation of departments of health in an organized way, and it is at the age that parents are most frequently deceived by the insidious onset of the disease; they frequently think the child has only caught a cold in the head until it has progressed too far to be cured."

The nickel produced in Canada comes almost entirely from the huge deposits of nickel-bearing pyrrhotite-chalcopyrite ores found in the Sudbury district of Ontario.

Fitting Boys For Life Overseas

Bristol Migration Committee Launched On Good Work.

H.R.H. Prince Arthur of Connaught, visited Bristol, England, on May 9th, to open a commodious hostel in which forty boys are to be in residence for training for farm work in Australia and Canada. A nine to twelve weeks' training course is provided, so that 200 to 160 boys and youths will be sent out each year.

This scheme has been launched by the Bristol Migration Committee, which has the Lord Mayor at its head, and which, with the co-operation of the City Council, will be able to train the boys on the Corporation Farm of 300 acres. It has a herd of cattle ranging from 60 to 100, sheep, horses, a big herd of pigs and about 800 poultry. The boys will be taught to adapt themselves generally to farm life.

In addition to the hostel the committee are using Cabot House—reminiscent of that Sebastian and John Cabot, who sailed from Bristol to discover North America—and here the boys will learn carpentering, boot repairing, and clothes mending, and be generally taught to become handy men.

His Royal Highness in opening the Hostel said:—

"It furnishes an example of what can be done by whole-hearted co-operation between all sections of the community. I am glad to know that the hostel has been generously supported by the City Corporation and by the Government. From my personal knowledge of the Dominions, I am certain that they offer great opportunities to British boys. At the same time, it is vital that boys going to the Dominions should be trained and prepared for the new life they are to live out there. The testing and training which is to be given at this hostel will undoubtedly stand them in good stead.

"Just over 400 years ago, the citizens of Bristol sent John Sebastian Cabot to sail from this port on a voyage which is famous even in your famous annals. They did better than they knew, for, though the voyage showed no commercial profit, it was the first practical step towards founding our Empire overseas. (Applause.) I believe Cabot took with him five cabin boys from this district, no doubt boys of similar ages to those I see round me now and if it is, I think, specially appropriate that the Corporation and citizens of Bristol should have taken up and consolidate that work, by helping their young manhood to maintain the British stock, and our British traditions in our great Dominions overseas. (Applause.) I know that these boys will be heartily welcomed there by their kinsfolk and that the great pains to help in the creation of wealth from the fertile land of these new countries, and it is well that their fellow citizens should see to it that they are properly equipped, as Cabot and his companions were, for the work that lies before them. I wish the boys every success. I would urge them to work hard, and play the game, never forgetting their parents, their city or their motherland." (Applause.)

Water Power Development

Canada Has Second Largest Per Capita Installation In the World

Addressing the Quebec Branch, Canadian Manufacturers' Association's annual meeting in Montreal, Henri Roland, retiring chairman, spoke of the year 1925 as one of marked industrial progress in the Dominion. "Already," he said, "Canada has the second largest per capita installation of water power in the world, with 3,313,000 h.p. per thousand of population, being exceeded only by Norway. Today, 3900,000,000, or $700 for every person in Canada, is invested in hydro-power plants, and numerous undertakings now in their initial stage will shortly add another $200,000,000.

Wireless is wonderful—yesterday I heard Tannhauser."

"Oh, I don't bother about those little stations. I only get Paris and London."

Many a preacher exhausts his congregation before he exhausts his subject.

Teacher: "What is stealing?"

Boy: "? ? ? ? ? ?"

Teacher: "If I put my hand in your pocket and take a shilling, what would that be?"

Boy: "A miracle."—Sondagsnisse-Strix, Stockholm.

Right Class Of Immigrants Cannot Fail To Make Good In This Land of Opportunity

The shipbonds of immigrants who are now arriving at our Atlantic ports and making their way to various parts of the country will, we have no doubt, with few exceptions, turn out to be self-reliant people prepared to make the struggle that average human beings have to make in order to get along. It is to be presumed that they have all heard about Canada as a land of opportunity, and they cannot misunderstand this to mean opportunity for living in idleness. Such of them as intend to stay, and not merely to linger a while as birds of passage on their way to the United States, must intend to do their part as producers of wealth. From time to time there may be need to help individual families to get on a footing of self-maintenance. Neighborly kindness from people already settled and thriving here is to be taken for granted. It is worth far more than any excessive paternalism on the part of the state.

Some organization in this country and some persons who set themselves up as class spokesmen make a great show of uneasiness about the increasing of the country's population by immigration. Labor leaders fear that we shall have more town dwellers than we can find work for. Agitators in the agricultural regions profess to be alarmed over the increase of tillers of the soil, who would add to the output of farm products and bring the price of these products down. These worried cries worry more than the willing and enterprising workers who arrive as immigrants. If the accessories to industrious and add to the country's total output they also add to the country's consumption. Efficient producers are efficient consumers. If they increase the produce that is to be marketed they also increase the capacity of the home market. Worthy immigrants cannot be long in this country without very greatly increasing their buying power. They will live better than they lived overseas because they can afford to do so. A hundred thousand new-comers of the right stamp will in a few years be worth far more to Canada as consumers of her products than they were as importers of Canadian products in the countries whence they came.

Canada has no fault to find with her own people. She cannot have too many of the same kind. We hope the native-born Canadians will go on increasing in number and the women of the stock that settled this country are needed to recruit its population and become the fathers and mothers of native-born Canadians. Then let us welcome with open arms all of the right kind who come from the British Isles and from the preferred countries of the continent of Europe. The coming of such people will assist in giving a further impulse to the progress of this country.—Toronto Mail and Empire.

Very Young At Forty

Italy Thinks Man Just Starting At Forty

France Gatta, young Italian electrical engineer, who was at the Hotel Pennsylvania, New York, from Milan, says the young men in America has more opportunity than the young man of Italy.

"We never have any thirty-year old man teaching in our university," he said. "A man is thought to be very young at forty, and is just getting his start. It takes me longer to finish our education and we are not given important positions until we have worked for many years with a firm.

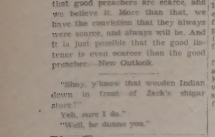
Preachers and Listeners

Sometimes we hear the complaint that good preachers are scarce, but we believe it. More than that, we have the conviction that they always were scarce, and always will be. And it is just possible that the good listener is even scarcer than the good preacher.—New Outlook.

"Sissy, y'know that wooden Indian down in front of Jack's shigar store?"

Yeh, sure I do."

"Well, he dunno you."



"The wreich pretends not to know me, and yet he has to thank me for his divorce."—Brummer, Berlin.

Making History

Greater Progression Shown Now Than In Any Previous Era

It seems a mere platitude to say that we live in times that will make history. The same could be said, and has been said, of all times since Man first began to think about the effects of his own days and his own achievements upon posterity. The world is busy today, as perhaps never before, preparing entirely new and improved conditions for the generations of tomorrow and the day after tomorrow. True, mankind was doing exactly the same thing during the last century and in the century before that, but this does not alter the fact that the present is a time of far greater activity than had ever been known in the past, in all branches of human activity. Applied science has revolutionized man's relations with his fellowmen, standards of living, of working, of thinking, are being raised at bewildering speed and will yet change more completely still. And the vast metamorphosis the most progressive as well as the most farseeing person of the human family is that which constitutes the British Empire.—Malta Daily Chronicle.

Winnipeg Newspaper Union

Jayhawk

PRACTICALITY AND CHIC

A printed silk crepe whose wearability makes it an economical choice for Spring and summer. Its lines are slender and straight; so becoming to every figure. The woolen or silk crepe top coat. The neckline is smart and comfortable for all day wear, with rever collar and scarg tie of plain harmonizing silk crepe. The box pleats across front of skirt are youthful fashion. Style No. 479 can be had in sizes 16, 18, 20 years, 36, 38, 40 and 42 inches bust, and is made with 3 yards of 40-inch material with ¾ yard of 36-inch contrasting in the 36-inch size. It is an excellent model for remaking with short sleeves or sleeveless or of printed crepe, striped wash-able radium silk, flat silk crepe or linen. Printed cotton foulard, georgette crepe, or featherweight suiting fabrics are also suitable. Pattern price 12 cents in stamps or coin (coin is preferred). Wrap coin carefully.

We suggest that when you send for this pattern, you enclose 10 cents additional for a copy of our Spring Fashion Magazine. It's just filled with delightful styles, including smart ensembles, and cute designs for the kiddies.

A Woman Brickmaker

The only woman in England who carries on the ancient craft of hand brickmaking is Mrs. Bonnie Glass, of Crossways Farm, Ingham. Her father died a year or two ago, leaving an old brickyard in a corner of his farm. Mrs. Glass turned her attention to brickmaking, and became an expert. She motored with assistance to the local building and public architects, who welcomed her fine hand-made bricks.

Thinks Ship Disasters Could Be Avoided

Astrologer Believes Stars Should Be Consulted Before Launching

Now it can be told. The thrift of shipping men, their reluctance to pay out good money for astrologers on their staff, is responsible for disasters at sea.

Ships that have met with disaster were launched at an unfavorable moment—from an astrological point of view, that is. And it would have been so easy for the well-fixed ones propitious hours for the launchings or at least to have avoided unfavorable hours. A well-paid first-class astrologer would never have permitted a launching to take place if for instance there is a new moon in the sign of the "Akasha Tatwa," or if Saturnus is under the sign of the Capricorn.

All of this knowledge we owe to Wilhelm Becker who confesses to be an eminent astrologer. If the shipping magnates of the North German Lloyd had taken Herr Becker about three earlier, they might have been spared the loss of their new giant vessel, the Europa, and an almost complete destroyed by fire recently in Hamburg Harbor. If you won't believe it, listen to what Wilhelm Becker has to say in the periodical "Astrology," way back in September, 1928. Then he cast the horoscope for the "Europa," and although he did not predict the conflagration he declared that things did not augur too well.

At the time of the launching of the "Europa," on August 15, 1928, at 3.15 p.m., the juxtaposition of the heavenly bodies was as follows: "There was a new moon in the sign of the "Akasha-Tatwa." Saturnus was under the sign of the Capricorn, and Jupiter in the sign of Libra was in 'receding' opposition to Mars, while the quadrant of Venus drawn in the eighth house.

This may mean little or nothing to you. But the expert eye of Wilhelm now at once that this kind of juxtaposition of planets is very unfavorable, not to say sinister, for, so Wilhelm claims, it signified that "five planets were in the zone of death."

Wilhelm Becker added that he did not want to give way to "Cassandric Cries," but that, nevertheless, he felt it his duty to read a similarly unfavorable horoscope, that of the illfated "Titanic," the giant vessel which foundered in cold waters after smashing into an iceberg one dark night in the middle of April, 1912.

Novel Polar Trip

Submarine Expedition Planned By Wilkins Seems Rather Risky

No one will question at just how valuable that proposed submarine expedition to the North Pole really is until somebody actually has made the attempt. Naval officers, familiar with submarines, say they would hate to try the trip which Sir George Hubert Wilkins and Lincoln Lake expect will be made under the polar ice by the rebuilt rescued submarine "Defender," but experts on undersea matters in this region assert that the expedition would have better than an even chance of success. Some of the former are inclined to shudder at the thought of pushing through the water below the vast ice fields, their lower decks over their ability to rise in open water and obtain air to recharge batteries. Storage battery equipment can be limited in any submarine and do is unbroken underwater cruising, although, the experts say, some submarines might be able to keep beneath the surface as long as 24 hours by cruising only three miles an hour. Mr. George Littlehales, hydrographer of the United States navy department, thinks Wilkins has quite a probability of doing what he has in mind. It is possible, he says, that there will be no icebergs to worry about; just an ice field, swayed by the tidal movement of the ocean, with leads and crevices large enough to permit a submarine to come up. A submarine navigator probably would have a free avenue of progress of about one day the ice ports. But what they would do with it when they got there is something the average man on the street would like to know. It is not thought that new species of underwater life are likely to be found. It is also said that Wilkins made this attempt and achieves his goal, the North Pole, once considered inaccessible, will have been visited six three widely different times; dog team, airplane and submarine.

British Capital Wanted

Canada, without American capital, or many other capital, observes the Ottawa Journal, and will always treat it fairly; but next to control of Canadian enterprises by Canadians the best thing that can happen is to keep control of what we have within the British family. That is one kind of Empire preference about which there should be unanimity.

Pulp and Paper Plant

Reports indicate the early establishment of a large pulp and paper industry in the vicinity of New Westminster, B.C. The site will likely be on Lulu Island.

Roman Matron: "Cornelia, run over to Horatius and tell him I'd love to have him make a fourth at bridge."

The Science Of Living

Knowledge Is Necessary For the Better Understanding Of Our Daily Needs

"The old cry used to be: 'The greatest happiness of the greatest number,' today the cry has been changed to the greatest health of the greatest number," writes Professor D. Fraser Harris in the "Clarion."

"The young people should not be brought up to believe that science does not concern itself with the practical details of our personal daily lives. She teaches us a great deal about ourselves, our food, our clothes, our sleep, and so forth. The science of personal hygiene is intensely practical, it tells us, for instance, why we must use hot water and soap to wash our skins, why even hot water alone is not enough.

A scientific training is one of the most powerful character-builders there is. For science is not antagonistic to the cultivation of artistic taste or to the highest conceptions of religion. She insists that 'science' and 'materialism' are synonymous is quite out of date.

"Science teaches us reverence and humility—reverence for the beauty in the Universe and humility in presence of its mystery. For although we know so much about the Universe there is plenty of mystery in it—the mystery, for instance, of the origin and maintenance of life, and the mystery of consciousness. Mathematics so perfectly adapted for their purposes or functions.

"Science—current science—fosters a love of beauty. Keats said that Newton, by explaining the colours of the rainbow, had destroyed its beauty. But Keats was wrong when he said that. For the adequately instructed mind, the man of science, the rainbow is enormously increased by the rainbow the intellectual beauty of a mathematical demonstration. The scent of the lily would be no less delightful to me if some day I should come to know the chemical formula for the substance of the perfume.

"Science teaches us that, as in Peter's vision, there is 'nothing common or unclean.' Science teaches us that the disease-bringing microbes and the stinking, slimy fungus, the parasitic worms and the 'devil-fish' must be studied with as much impartiality and detachment as the lily, the rose, the bird of paradise or the human body."

A Submerged City

Photographers are making pictures of the submerged city of Jamestown, once the capital of Nevis, an island in the West Indies. The remains of the city may be seen near the shore, beneath the level of the sea. Jamestown, on April 30th, 1680, was visited by an earthquake, and the town slipped into the sea, carrying with it all its riches and a population of 14,000.

Why Latitude Varies

According to a new theory of Dr. Harlan T. Stetson of Harvard, the moon not only causes tides in water but on the crust itself of the earth. This is tendered as an explanation of the variations in latitude when it is measured from the Equator.

Buying More Wheat Flour

Increase In Sales From Canada To Northern Europe

Canada is increasing sales of wheat flour in Northern Europe, despite tariff barriers in many cases. This statement is contained in a report to the department of trade and commerce by M. B. Palmer, acting trade commissioner to Hamburg.

Sales to Germany, Austria and the Baltic States, Scandinavia and other countries in the area amounted to 2,342,980 barrels of flour valued at $15,683,597 in 1928 as compared with 2,332,980 barrels valued at $13,972,-032 in 1927. Germany imported 14,-018,625 bushels of wheat from Canada in 1928; 2,168,390 bushels of rye; 1,766,925 bushels of barley, and 946,-256 bushels of oats. These total nearly $27,000,000 or 07½ per cent. of the total value of Canadian exports to that country.

Czecho-Slovakia, Denmark and Scandinavia are also heavy buyers of Canadian grains. Germany buys large quantities of packing house products from Canada, notably sausage casings to the amount of 1,376,-760 pounds valued at $395,000 in 1928. Other commodities of great importance in Canada's exports to Germany include dairy products, honey, canned goods, fresh and dried fruits, fish and fish meal, seeds, crude drugs, whiskey and foxes.

The Call Of the Land

Cyrus G. Shaver Returning To Manitoba To Farm Again

"The call of home" is strong. In the case of Cyrus G. Shaver, the call of the soil was too strong for him to resist.

Mr. Shaver was born and raised on a farm in the Pembina Valley, in southern Manitoba, and in 1923 he left Canada and secured employment in Detroit.

In Detroit he did well and bought a home and settled down.

The call of the soil of the homeland was too strong and he recently appeared in the Land Settlement offices of the Canadian National Railways at Winnipeg.

Two days later he had secured a farm, 320 acres in extent, near the town of Dugald, two stations east of Winnipeg.

He has made arrangements to bring his family back to Canada with him to take up life in the province he knows intimately. The farm is provided with first class buildings and much of the land is now under cultivation.

The Tables Are Turned

There are no more people migrating from the United States to Canada than there are Canadians migrating south of the line. Year ending March 31st, 1929, Canada received 161,787 aliens, of which 53,782 were returning Canadians. The number of Canadians leaving for the U.S.A. has been declining in the last 3 or 4 years.

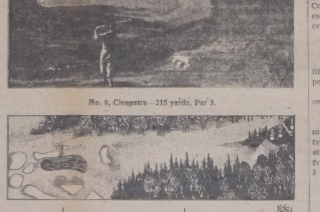
Miss Pasmarte: I hear you have a model husband. Is he a fine model?

Mrs. Junebride: The very latest. From 12 to 2 a.m. every night.

Inscription on a tombstone; "Here lies an atheist all dressed up and no place to go."

Age makes some men wise to their lack of wisdom.

A TEASER



The ninth hole of the Jasper Park Lodge Golf Course, Jasper National Park, Alberta, over which the amateur championship of the Royal Canadian Golf Association will be played August 19-24 this summer, is one of the trickiest in Canada. The championship tee (No. 1) is considerably elevated and the green, which is very fast, is also built up high. The trick, therefore, is to play a tee shot which will hold the green. Yawning traps surround the green to eat up the strokes of the golfer who fails to play this hole properly. Like its famous namesake, "Cleopatra" is likely to wreck a lot of reputations at Jasper in August.

Co-incident with the Canadian Amateur, the Western Canada Amateur will be played over the Jasper Park Lodge Course, and this will provide plenty of competition for those whose high handicaps automatically keep them out of the Dominion event.

The upper platform tee was made from No. 1 tee. Below it is a plan to scale showing the hole in detail with the three tees plainly indicated. The figures below represent the yardages.

The Interesting Story Of A Remarkable Achievement In Canadian Railway Construction

Canada's High Grade Seeds

Excellent Quality Is Commanding Recognition On Foreign Markets

The production of high-grade seeds in Canada is rapidly becoming of importance. Canadian-grown seeds command recognition on foreign markets by virtue of their inherent qualities of winter hardiness and vigor of growth, and because the standards of quality for graded seeds of all kinds are so highly regarded. Stocks of high-class seed of wheat, oats, barley, alsike clover, sweet clover, brome, Canadian blue, and brown-top are usually available for export. Average imports of timothy seed are about 1,500,000 pounds annually, but with further improvement Canadian production will soon be equal to our requirements. Alfalfa seed shows a decrease in quantity due to adverse climatic conditions. Red clover seed production in Quebec and Ontario is increasing from year to year, due to encouragement given by the Dominion and Provincial Departments of Agriculture, and the demand for hardy, home-grown seed. Alsike seed production in the older districts of Ontario is keeping pace with demand but not in quality. The newer districts of Ontario and Quebec are producing small supplies of cleaner seed. Tests are conducted in Northern Manitoba and Saskatchewan to determine if alsike seed can be produced profitably in large quantities

WHAT WILL IT DO?

Women are saying: "Pinkham's Compound keeps me fit to do my work." "I was nervous and all run down. Now I eat better and sleep better—". "It helped my 16-year old daughter." "I took it before and after my baby was born." —"I am gaining every day."

Lydia E. Pinkham's Vegetable Compound

WORLD HAPPENINGS BRIEFLY TOLD

Flutarco Calles, former president and minister of war for Mexico during the recent revolt, has retired from politics.

Veterinarians of Manitoba will hold their semi-annual meeting in Brandon, July 5, during the week of the summer exhibition.

It is estimated that 22,000,000 acres will be sown to wheat in Canada his year, or 1,000,000 acres more than a year ago.

The Dominion treasury has $78,231,100 in gold in the central gold reserves, while according to last bank statement the banks of Canada hold in their own vaults in Canada an additional $40,000,000 in gold.

A flight by Russian aviators from Moscow to New York by way of Alaska is the latest Arctic adventure by the Soviet airway commission. The plane, called the "Land of the Soviets," will be manned by four men.

Convicted to be hanged at Prince Albert, Frank Carrier, 76-year-old farmer of the Meadow Lake District, was informed that reprieve had been granted and that the sentence had been commuted to life imprisonment.

Manuel Dorras, a member of the crew of the Alaskan Steamship Company liner, "Aleutian," who climbed back on board from a lifeboat and rescue a "lucky" horseshoe, was the only fatality when the vessel struck a rock and plunged to the bottom of Uyak Bay, near Kodiak Island, Alaska.

The Dominion government has collected in income and business profits taxes $742,128,162 from the time the tax was first imposed in 1916, up to the end of the last fiscal year. It cost $19,226,127 to collect these taxes, or 2.46 per cent. This announcement was made from the office of Hon. W. D. Euler, minister of national revenue.

A Dread Scourge

New Methods Needed To Make Headway Against Cancer

Sir Arbuthnot Lane, one of the leading medical authorities of Great Britain, thinks the malign growth must shift its ground completely if it is to make any headway with the fight against cancer.

Undisputed statistics prove that the death rate from cancer constantly rises. It has doubled between 1911 and 1926, the British physician says, and multiplied eight times in less than a century. Therefore a complete change of method on the part of those treating this disease seems necessary.

"I believe," said Sir Arbuthnot, "that the only cure for cancer lies in prevention. It never attacks a healthy organ. Accordingly he reasons that only the healthy body will be found to keep well is to be the function of the physician in future. Simple enough if the doctors can do it.—Detroit News.

Must Have Had One

"Guilty or not guilty?" asked the judge sternly of Rastus, charged with chicken stealing.

"Not guilty, Judge."

"What's your alibi?"

"Alley by which I?"

"You head me; have you an alibi?"

"You mean, Judge, de alley by which I got away?"

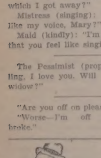
Mistress (dinging): "How do you like my voice, Mary?"

Maid (kindly): "I'm glad to know that you feel like singing, ma'am."

The Pessimist (proposing): "Darling, I love you. Will you be my widow?"

"Ah," she moaned wearily, "cut off like a flower she were! I allus knew I'd never be able to rear that gal."

"Are you off on pleasure bent?"
"Worse—I'm off on pleasure broke."



"Three days ago my mother-in-law fell in the sea."
"Poor woman."
"No, not a toss rescued her."
"You poor wretch."—Campana de Gracia, Barcelona.

Canadian Amateur Golf Tournament

Large Number Of Entries For Meet To Be Held At Jasper Park In August

A particularly large and experienced field from Western Canada will be entered in the Canadian Amateur Tournament of the Royal Canadian Golf Association, at Jasper Park, in August 19-24, according to C. E. Harvey, President of the R.C.G.A., who returned to Winnipeg recently from a trip to the Pacific Coast, during which he visited all important points in the west and interviewed many golfers.

"All clubs in the large cities are sending big teams," he said, and Mr. Harvey, "and we are assured of one of the best fields this event has known. The west, certainly, can be depended upon to do its share, and we are hopeful that eastern Canada will also rise to the occasion and fully represent itself in the tournament. The west has never failed to send full representation to this tournament and the golfers have been kept in the east, and we are looking for a reciprocity from the east in such representation this year. If the Canadian Amateur is to be considered a national tournament, golfers in all parts of the country will have to participate in it, so my trip was to see to it that the best players from all parts of the Dominion enter.

We are already assured of the entries of such well-known golfers as Ross Summerville, Canadian Champion, who will defend his title; Don Carrick, former Canadian champion; Matt Thompson, Jimmy Mountfield, western amateur champion; Jack Culbert, former western champion; Marson Hughes, present Manitoba champion; "Chuk" Hodgman, runner up for the Manitoba championship; Don Love, Saskatchewan champion; Norman Scott; Alfred Bull, winner of the silver totam pole trophy, Jasper Park Lodge Tournament, and a host of others. Many enquiries have been received from prominent golfers in the United States, and while no definite information is available at the moment, it can be said that prominent among those from across the border will be Harrison R. Johnston, of Minneapolis, one of the greatest of the amateur players to the South."

The dates of the tournament this summer is the fact that coincident with the Canadian Championship, the Western Canada Championship tournament will be held this year, according to Mr. Harvey, this arrangement will permit a lot of competitive golf for players wishing to make a trip too high to allow them to enter the Dominion Title play. The Western Canada Championship has a large number of valuable prizes, which give every one a chance for a prize. In addition, Mr. Harvey said, there will be the Inter-Provincial Match, which will decide whether the four best players from both Ontario and Quebec. It is hoped that this year a team from Great Britain also will also be represented in this match. Up to the present, British Columbia, which has always sent a team from the old country, and is capable of producing an exceptionally strong team, has not seen fit to enter this event.

Prominent Agriculturists To Meet

Canadian Wide Gatherings Of Seed Growers and Scientists At Winnipeg

(By E. Cora Hind)

June 8 to 15, are to be important days for agriculture and livestock in Canada for during those eight days the year's work and findings of the Canadian Breeders Of Canada, the Canadian Seed Growers, the Canadian Technical Agriculturists, and the Western Canada Society Animal Production, will all be discussed and action taken on such important subjects as the standardization of grades of potatoes, vegetables and flowers for registration and approbate and determine the extent to which the Seed Growers Association might go in encouraging the production of field roots, vegetables, garden and forage crops suitable for registration. Special interest will centre on the question of the registration of Alfalfa and other cross fertilizing crops.

From the cereal breeding committee will come a report which will be the basis of a discussion on the desirability of retaining generation numbers and special attention will be given to whether or not "number three hard" should be eliminated. It is expected that a decision will be arrived at as to the proper type of Marquis wheat required for registration.

The Canadian Seed Growers will have only two addresses from their annual meeting. Dr. H. G. H. Strange, will deal with the work generally, and Prof. T. J. Harrison, will speak of his recent trip to Europe, and the types of barley required for the British market.

The Animal Production men are bringing two world famous men whose names are well known by all the organizations. These are Dr. F. B. Kinsley, D. Sc., professor of animal genetics, University of Minnesota, and Dr. J. Hammond, Professor Emeritus of Veterinary Surgery, Cornell University. The Canadian special attention will have as a special speaker, Dr. Richard Staples, M.A., M.R.C.V.S., Animal Pathologist at the Manitoba Agricultural College, who has been working in collaboration with Dr. Williams. The Canadian Technical Agriculturists will have Dr. H. R. Humphrey, Pathologist in Cereal Diseases, Investigational of the United States Department of Agriculture, and Dr. A. G. Grieve, Chief of Pomology Agricultural Station, Urban, Ont., Dr. Rutherford H. three gatherings have ever been graced by a more renowned group of specialists.

The Provincial Government of Manitoba will entertain the important business bodies of Winnipeg at a luncheon in appreciation of the importance of the meetings by offering luncheons and dinners.

Tuesday, June 8, will be the Provincial Department of Agriculture and Colonization's day. Chief of the store, when the Minister will preside and Premier Bracken will be the principal speaker. The Seed Growers will be the guests of the Canadian Seed Trade Association night, the guests of the Winnipeg Grain Exchange at the Fort Garry Hotel; Wednesday night, the Seed Growers and the Technical Agriculturists will be the guests of the T. Eaton Company, and will be entertained by a motor drive after dinner.

Thursday, June 13, there will be an excursion to the Dominion Animal Experimental Farm, at Morden, supper and dance at Morden and back moonlight. It is hoped, that a number of the ladies will come with their husbands to these meetings, and special entertainment is being provided for them.

The Province of Manitoba and the City of Winnipeg will be represented at the opportunity afforded of entertaining such important bodies, and hope to give them a suitable and very happy time during their stay.

Will Appeal Fisheries Case

Two Questions Of Importance To Provinces Involved

Involving two questions of national importance, the right of the Dominion to refuse licenses to Japanese fishermen and the constitutional British subjects, an appeal from the Supreme Court of Canada, by the Minister of Fisheries, will be heard by the Judicial Committee of the Privy Council in July.

Opposing the appeal is the government of British Columbia. Aligned with the province in its fight to control fish canneries are the sister provinces of Alberta and Ontario. Not since Confederation has the power of the Minister of Fisheries to license canneries and to license, with discretion, Japanese fishermen, been previously contested.

Foundation Of the Farming Industry

Cow Serves Mankind In More Ways Than Any Other Animal

The cow really forms the foundation of the farming industry. Not only does she supply the world with all the milk products, such as butter, cheese, milk and cream, but almost all her flesh can be eaten, and beef is the staple meat of most countries. Her hide is used for making leather, and her hair for mixing with plaster. Glue is made from her hoofs, and gelatine powder from her joints. When everything else is removed her bones are ground into fertilizer in so many ways.

A junk shop near a railroad crossing in a large American city has a sign out in front, which reads: "Go Ahead, Take a Chance. We'll Buy Your Car."

Game Warden: "Hey, young man, what's the idea of hunting with a last year's license?"

Biles: "Oh, I'm only shooting at the birds I missed last year."

WOMEN'S TENNIS CHAMPION

A most recent photograph of Helen Wills, women's tennis champion, taken when she was in London on the occasion of her presentation at court. She is seen here just leaving the American Women's club.

Farming By Mail Aids Immigrants

Prospective Settlers Trained In Canadian Farm Methods

Keen interest has been shown in Scandinavian centires in the correspondence courses in Canadian agriculture which has been conducted for some years in Great Britain by the Colonization Department of the Canadian National Railways, and has now been extended to a distribution in book form in Norway, Sweden, and Denmark.

According to information received by Dr. W. J. Black, director of colonization for the railroad system, the course has been well received by the Scandinavian people and more than 2,000 copies have already been distributed in Denmark alone, where high officials describe the book as the best ever published in that country on Canadian agriculture.

In Britain, many hundreds of intending settlers have enrolled in the course, which is conducted in a series of ten lectures. The British government is giving assistance in extending it. The supervision of the course is now in the hands of a young Canadian agriculturist, W. G. Malahar, B.S.A., a graduate in agriculture of Alberta University. Mr. Malahar has been assistant professor of English and Mathematics in the school of Agriculture at Vermilion, Alta. He is an Englishman by birth but has resided in Canada for the past ten years.

Canada's First Passenger Train

Left Toronto Station On May Sixteenth, 1853

Seventy-six years ago on May 16th, at 8 o'clock in the morning, the first passenger railway train to run on the North American continent left Toronto nearly opposite the Queen's hotel on Front street. Toronto, and made its initial trip to Aurora, Ontario. Up to that time the only form of transportation was the old horse-drawn stage coach and the carrier's wagon. The train consisted of a locomotive engine with 5-foot driving wheels and a 14x20 cylinder, 'a box car and a passenger car. Alderman John Harvie was the conductor, and passengers had to purchase their tickets from him on the train. The fare was $1 each way. The journey occupied two hours. The engine drawing the train was named "Lady Elgin" after the wife of the governor-general.

Will Trek To Alberta

Another of the Hutterische Brüder Gemeinde colonies, organized near Freeman, South Dakota, by Russian Germans of the Mennonite sect, will leave South Dakota when the Wolf Creek group, numbering about 150, trecks to Alberta. An option on their property comprising 2,000 acres of improved land, has been obtained by A. W. Harper, Minneapolis banker, who plans to dispose of it in tracts of 160 acres each.

How To Measure Height

To measure a tree, cut a stick straight up in the ground. Use a plumb line to get it absolutely perpendicular. Measure the shadow it casts, and the shadow cast by the tree. As the shadow of the stick is to the length of the stick, so is the shadow of the tre to its height. Figure it out.

Little girl to uncle, whose yellow wife has just stopped talking to take breath: "Now, Uncle Henry, you say something."

SUNDAY SCHOOL LESSON

JUNE 9

THE STORY OF THE RECHABITES

Golden Text: "We will drink no wine."—Jeremiah 35:6.

Lesson: Jeremiah 35:1-19.

Devotional Reading: Psalm 107:1-9.

Explanations and Comments

Jeremiah's Test Of the Rechabites verses 1-5.—"Among the people who crowded about Jeremiah when the dreaded Nebuchadnezzar, was a tribe that excited much curiosity because of its strange manners. The sheik's name was Jaasaniah—he whom Jehovah tests. They refused to shelter in the houses or permanent buildings, but pitched their dusky tents in an open space within the city walls. Their record was honorable, and reached far back into the early days of Hebrew history. From the wilderness south of the Exodus the Kenites kept up friendly relations with Israel during the intervening centuries, and it was of them that the Rechabites had sprung (Judges 4:17-24; 1 Sam. 15:6; 1 Chron. 2:55.) About the time of Elijah, and perhaps through his influence, the leader of one branch of the tribe was Jonadad, the son of Rechab. He was grieved at the abounding corruption of the Northern Kingdom, and fearful lest the spell of Jezebel and Ahab. In his endeavor to save his people from such a fate, this man, afterwards Jehu's confederate in the extirpation of idolatry, bound his people under a solemn pledge to drink no wine for ever; and not to build houses, to sow or plant vineyards, but to dwell in tents."—E. R. Meyer.

These Rechabites and their stanch adherence to the principles laid down by their ancestor Jonadab Jeremiah's excellent opportunity for an object lesson. Accordingly he led them into one of the rooms ranged around the temple courts and bowls full of wine set before them, together with vessels, from which the wine was poured, and invited them to drink. "But wine," Jeremiah knew. But it was a time for such basic principles. And it was the prophet himself who bade them drink.

"I count life just a stuff
To try the soul's strength on."
—Browning.

"On the shore of almost any lake you can find an allegory of human life. Farthest back from the line where the land and water forever meet is the sand, tossed there before the highest waves ever reach it, by the strongest storms. Nearer lies shells which yield less readily. And nearest the water, the solid rocks that the waters can neither break nor move."

Recipes For This Week

(By Betty Barclay)

CALIFORNIA MOCK DUCK

1½ pounds flank steak.
1½ cups soft crumbs.
1 cup chopped prunes.
1 egg.
½ teaspoon salt.
½ teaspoon pepper.
1 teaspoon lemon juice.
Small piece of suet.

Pound steak. Brown quickly on both sides in a hot frying pan. Mix other ingredients and place in center of steak. Roll and tie. Lay piece of suet over the top, place in a roasting pan, cover with hot water, bake for one hour. Thicken liquid for gravy.

ORANGE AND RHUBARB SAUCE

2 pounds rhubarb.
2 oranges.
1½ cups sugar.
1 tablespoon granulated gelatine.
1 tablespoon cold water.

Wash rhubarb, cut into inch pieces. peel oranges, removing membrane with peel, and cut in small pieces, put rhubarb, orange, and sugar in an earthenware or glass baking-dish, and bake about one hour. Dissolve the gelatine in the cold water in a barb mixture, and when cool, fill individual pastry shells with sauce, and garnish with whipped cream, forced through pastry bag and rose tube.

Finds Rubber Heart Works

Surgeon Thinks It Will Prove Good Substitute For Natural Organ In Experiments

A cat equipped with a rubber heart lived for several hours, Dr. O. S. Gibbs, of Dalhousie university, announced in a lecture at the Nova Scotia institute of science.

The heart, electrically operated, maintained full action in the feline circulatory system, from which the natural heart had been removed.

Experiments to study the effects of drugs on the system were wear out the natural heart, Dr. Gibbs said. He expects the rubber organ to prove a good substitute.

Dr. Gibbs also told of the small, tan cat took about five minutes.

Requires Modern Dress

Can you imagine a woman in a hoop skirt behind the wheel of a car? Can you imagine a woman with a bustle-effect sleeve playing golf in the back seat with three others? Can you imagine a woman with a stove-pipe skirt so tight that she could not walk was impossible, playing tennis or softball? Can you imagine a woman wearing a bustle and a draped skirt driving an aeroplane? And then cease to find fault with the clothes worn by the modern active woman.

He: "Wouldn't you tire of seeing me at breakfast every day?"

She: "Oh, yes, but I don't get up for breakfast."

The speed at which sensations are transmitted along our nerves is about 100 feet a second.

Romantic Story Of Progress

Empire Buyers Are Empire Builders, Making Prosperity For All

Carry the mind's eye back half a century and there commences the most remarkable example of city building on this continent. It is the story of Winnipeg, which, starting from an Indian Trading Post to the Grain Centre of the world and the Metropolis of the Great West. And what is true of that pioneer city of the plains in true also of the West as a whole, of modern cities like Regina, Edmonton, Calgary, Lethbridge and many other progressive centres.

The morning of the 24th of August, 1870, marked the closing scene of the Red River Rebellion. Riel, timid, shoeless and unarmed for fear, fled a few minutes before Col. Wolseley, at the head of the 60th Rifles, entered Fort Garry. The arrival of the troops infused confidence among the people of Fort Garry and trade revived, money became plentiful.

The first cabinet of Manitoba was formed on June 15th, 1870. In only in this year showed Manitoba's population divided as follows: French half-breeds, 5,720; English half-breeds, 4,083; Whites, 1,565; Indians, 1,600; total, 12,960.

Winnipeg's population at this time was about 215 souls. Communication was by Red River Cart overland to St. Paul. No regular stage route was established. Mail came and went. There was no bank, no post office, no lawyer, one doctor, one church, one little newspaper, one policeman and about 20 buildings in Winnipeg. The first grocery in existence was John Inson's Bay Company's notes.

These Rechabites and their stanch adherence to the principles laid down by their ancestor Jonadab Jeremiah's excellent opportunity for an object lesson. Accordingly he led them into one of the rooms ranged around the temple courts and bowls full of wine set before them, together with vessels, from which the wine was poured, and invited them to drink. "But wine," Jeremiah knew. But it was a time for such basic principles. And it was the prophet himself who bade them drink.

ing its share in building prosperity in industry in its own sphere—the most important thing that can be performed by a company whose interest (and that of its patrons) is closely interrelated to each other's homes and welfare. Through the co-operation of their customers they have prospered and trust that their share in building empire trade in their own niche has not gone unappreciated by their many friends.

Conditions Better In Great Britain

Great Improvement Shown In Basic Industries

"Conditions in Great Britain are materially better than they have been since the strike and there has been a great improvement in the basic industries," said P. A. Clews, European Trade Manager of the Canadian National Railways, who has come to Canada from London on a short business trip. "There has been a marked revival in the coal trade," he said, "and the severe weather which reigned all over Europe last winter helped the British producers to regain some of their lost markets."

Last year, Mr. Clews said, the Canadian National Railways dealt with the largest freight traffic in Europe in their history. "The tourist movement to Canada is increasing astonishingly" he added. "The people in Europe are becoming more and more interested in the possibilities of spending a holiday in the Rocky Mountains, particularly in such places as Jasper National Park, which appeals greatly to their imagination."

Minister Signs New Postal Convention

Rates Between France and Canada Have Been Reduced

Reductions in postal rates between France and Canada were brought into effect by the signing of the new postal convention between the two countries. The convention was signed on behalf of France by Foreign Minister Briand and Germain Martin, under. secretary for posts and telegraphs. It has already been signed on behalf of Canada by Hon. Philippe Roy, Canadian minister to France, and L. J. Gaboury, deputy postmaster.

The rates from Canada to France are now the same as those prevailing between Canada and Great Britain, and on letters the rate is two cents.

From France to Canada the existing postage rate is reduced 50 per cent. The new rates were brought into force immediately.

First Air Wedding In Western Canada

Ceremony Took Place Recently 2,400 Feet Above Earth

For the first time in the history of Regina and Western Canada, a young couple more than literally lapped off on a cloud of matrimony when Miss Muriel Stuart James, daughter of Mr. and Mrs. J. A. James, Chaplin, and H. Leighton Sargent, Regina, were married at 2,400 feet above the city. Rev. J. D. Wilkie performed the ceremony, the bride being attended by Miss Margaret Nicks, Jack Wright, pilot, acted as best man, and following the ceremony the happy couple went for a half hour honeymoon flight.

Will Use Manitoba Stone

Canadian stone from the Tyndall quarries in Manitoba will be used in the construction of the new T. Eaton Company store at the corner of College and Yonge Sts., Toronto, the first unit of which is now being erected, it is announced by Harry Crane, vice-president of the company.

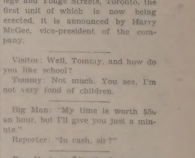
Visitor: Well, Tommy, and how do you like school?

Tommy: Not much. You see, I'm not very fond of children.

Big Man: "My time is worth $5 an hour, but I'll give you just a minute."

Reporter: "In cash, sir?"

Ben Nevis, in Scotland, although only 4,406 feet high, is the highest mountain in the British Isles.



"I took all that trouble to make him give up the drink and then he went and got drowned bathing." — Faun, Vienna.

The Desert Song

—BY—

VIRGINIA MORRIS

Copyright 1929 Warner Bros. Publications

"The Desert Song" is a Warner Bros. Publication of 1929-30. It is based upon the characters created by Laurence Schwab, Oscar Hammerstein, 2nd, and Frank Mandel.

CHAPTER II.—Continued

Old Hassi nodded. He remembered the night well, remembered the masked figure who had stepped into their camp and shouted defiantly, "Give me twenty of your young men who are not afraid to die! And if the law is wrong, we'll overturn the law!"

"I was only a boy indeed," continued the Red Shadow, "but I dreamed of saving the people of Morocco from injustice. When I returned to Fez, they forced me to resign from the army. I acted as if that blow had made me stupid, almost half-witted. I spent all my time picking wild flowers and so they searched high and low for the Red Shadow, never suspecting that he was the stupid, timid boy living right in their midst."

Then complications had arisen. General Fontaine died and the Red Shadow's own father, General Birabeau, was sent out from France to command the post at Fez. He had come with one purpose uppermost in his mind—to wipe out the Red Shadow. How was his son, Pierre, to meet this situation? Could he betray the people he had learned to love? He could not. And yet it was no less difficult to keep his parent from suspecting that his boy was an enemy of the French.

"So I continued to play the fool," he went on, "and I succeeded in deceiving my father. Now he thinks he thinks I am a weakling he hates me. That is bad enough, but to see Margot despise me too! Why, I came to Morocco to show Margot I was a man!"

Back among the tents there came a scurry of excitement. A volley of guttural oaths filled the night as a dozen of the Red Shadow's men dragged in a prisoner taken by the sentry. He was thrown unceremoniously in front of the fire—five feet of insignificance dressed in bulging riding breeches fashioned out of enormous checks. It was hard to say which was the most ludicrous, his outlandish clothes, his mustache on his tiny face, pale with consternation.

Hassi drew his sword. "Let's kill him! He's a spy! I'm after blood."

The stranger's squeaky voice protested. "Well, don't look at me. I'm anaemic!"

The menacing face of Hassi terrified him.

"You can't kill me. I'm an American! Not to spy. I'm only the society correspondent for the Paris Herald. I didn't even mean to come here. Early this morning I went out horseback riding with my friend, Pierre Birabeau. Later he gave me the slip and I thought he had headed this way."

At this point the Red Shadow came forward. He spoke in the Riff's native tongue. What he said meant that the prisoner should be released.

CHAPTER III.

Like most girls who have read story books and believed in them, Margot Bonvalet was beginning to find life a bit disillusioning when she came to actually living it. She had arrived in Fez expecting to find there all the high romance of the sentimental novel. Her Paul would be a dashing hero in his uniform of the Foreign Legion. He would sweep her into his arms and carry her away on horseback, far out into the desert,—and there would be a wild courtship under the Moorish moon. But instead, she had made the disappointing discovery that Paul was half of the soldier and only half lover when there was nothing else to interest him. His devotion to military duty made him more of a machine than a dauntless knight.

He left her alone a good share of the time and she found it necessary to rely on inconsequential flirtations with the officers or tedious conversations with General Birabeau's son, Pierre, who worshipped her at a respectful distance but who scarcely qualified as a suitor since Margot regarded him as a mollycoddle. There were no other women at the garrison except Susan, the secretary and sweetheart of Bennie Kid, the Paris Herald reporter, and Azuri, a dark-skinned native girl who was not officially one of the household but who lurked about at all hours when she brought Captain Fontaine's meals.

Margot and Susan were chatting together when Bennie returned from his desert adventure. Susan felt sure he could not bother himself with love when his arms, too, had been among the dreaded Riffs themselves.

"Bennie did you see the Red Shadow?" Susan queried.

"Yes— and what a tough guy," Bennie replied, "Why he came riding into camp on a tiger, using a rattlesnake for a whip. And because he was hungry he ordered a live cow. When it was brought in he took out his sword and cut off a slice for himself."

Susan's eyes were popping. "Raw, Bennie?"

"It was the rawest thing I ever saw done to a cow!" he assured her.

Just then Pierre Birabeau appeared in the doorway. He said he hadn't missed him for Pierre always took a nap in the afternoon. To Margot he was a nice boy though somewhat of a bore. Would she not have been astonished could she have watched him a minute before when he had hastily stuffed a perfumed nosie into the heavily carved chest in his bedroom? Yet he had not been curious enough, for Azuri had stayed behind a chair like some lithe animal, had seen him.

Pierre ventured timidly toward Margot and handed her a small bouquet. "See Margot, I've got some lovely wild flowers for you!"

The girl looked at him despairingly. "Wild flowers! Oh Pierre, why don't you go out and fight the Red Shadow? If only you would do something to make me proud of you!"

Suddenly she caught sight of Captain Fontaine coming across the court yard. When he entered she greeted him ardently.

"What luck, Paul?"

"Great luck, Margot! I nearly caught the Red Shadow. I found his secret hiding place and I've covered it with a concealed machine gun. Next time he goes there we'll mow him down."

"Bravo!" shouted General Birabeau who had arrived in time to hear Fontaine's confident boast.

"Oh, that's great!" put in Pierre. "But father, wouldn't it be funny if he didn't go there again?"

The General did not bother to answer his son and Pierre who was well accustomed to snubs, resumed a dejected pose. His father's interest was primarily in Paul. He had been watching the progress of his romance with Margot and had noted the soldier's neglect and the girl's dissatisfaction. For the sake of his friendship for Margot's father, General Birabeau sincerely desired her happiness. He saw a way of promoting it.

"A boat of the French Line stops here tonight, Paul," he told him. "It's just finishing a Mediterranean cruise. You and Margot might take the Bridal Suite and an Governor of the Post, I can marry you."

Margot interrupted. "As the bride, don't you think I deserve to be consulted?"

Paul laughed. "You could hardly be married in that riding habit, Margot!"

Margot tossed her head. "I don't suppose you thought that we two might go riding in the desert together!"

"You see, Paul," General Birabeau told him good humorously, "Margot hasn't yet picked her up as your horse and carry her across the hot desert sands."

Perhaps Paul's sense of the romantic was partially awakened. At any rate the plan for a hasty marriage appealed to him and he begged General Birabeau to make out his passport. Then he turned to the girl.

"Margot, I'll be back for my answer in five minutes. If it's no, I'll make you say yes!"

"There, Margot, there's romance for you!" remarked the General.

As Paul crossed the inner court, Azuri sneaked up beside him. He raised on her with a furious contempt.

"Azuri, you can't follow me into this."

She rubbed her sensuous body against him. "Lover, come with me tonight to the hills—and tomorrow night, two—and tomorrow, I will whisper to you the name of the Red Shadow!"

"I don't believe you. You don't know."

Azuri twined her arms about his neck and placed her warm dark mouth against his ear. "I know and give you up to this French woman!"

Fontaine wrenched himself free and with a shout of hunger she threw her roughly to the ground. Her dark eyes flashed jealously as she rose slowly, showing her gleaming teeth. "I know and swearing.

"Azuri—that name means tiger claw. When she loves she loves for death and when she hates—she hates!"

And Azuri crept out toward the desert, leaving this half murmured threat ringing in Fontaine's ear.

(To Be Continued.)

Real Philosophers

Some Men Who Showed Themselves Equal To Any Occasion

"Cromwell, Bismarck is a great humorist," says the Morning Post, commenting on the destruction of Mells rectory, "but it would take a very acute sense of humor to see the funny side of being burnt out of house and home." Yet the spirit of man has proved equal to the occasion. The building down of Drury Lane, in 1808, ruined Sheridan, but he watched the spectacle from a coffee house opposite, and complained on remonstrance, that "it was hard a man couldn't sit by his own fireside in peace."

When, again, Crewe House was burned down, Lord Crewe had a table brought out to the lawn, and wrote to the architect: "Dear Mackie, Crewe is burning down. Come and build it up again"—which is, at least, resignation raised to the Horatian. Another member of the third Lord Londonderry, exhibited the one virtue without the other. He was travelling abroad when he received news of the fire at Wynyard, and wrote in his diary: "Here I learnt that Almighty God, for reasons best known to Himself, has been pleased to burn down my house in the county of Durham."—London Observer.

Wise mothers who know the virtues of Mother Graves' Worm Exterminator always have it at hand because it proves its value.

The Law Of Nature

Does Not Recognize Frailties Or Mistakes Of Man

One of the facts of life that have to be continually reckoned with is that everything man invents, works and opposes is are designed for beneficient purposes, has within it tremendous possibilities of destruction. Electricity is a force of mercy, administering to the needs of the human race, or it may be a veritable demon of disaster if not rightly controlled. It was the very agencies used in the Cleveland hospital for the relief of suffering that proved in the end the death of many. The laws of nature are inexorable, and take no cognizance of the frailties or mistakes of man. By bitter experience he has learned this, and the Cleveland holocaust brings home this truth again.

Guided By Electricity

Aeroplanes of the future will be guided through fog, storms and across treacherous mountain ranges by an electrical cable if the plans of a Pretty inventor work out. His plans to work the system similar to that worked on a ship—an electric cable buried in the ground would influence delicate instruments in the plane's control cabin.

Willie: Ma, a dog bit me.
Mother: Put some peroxide on it.
Willie: I can't. It runned away.

Keep Minard's in the Medicine chest.

Russia Faces Bread Shortage

Long Winter Has Killed Bulk Of Winter Wheat Crop

Russia is faced with another bread shortage this year due to the fact that winter crops in the Ukraine and the Caucasus have been killed to a considerable extent by the long winter, which lasted into the first weeks of May.

Reports received from the Ukraine tell a tragic story of how the peasants will have to reseed their fields, and add that the wheat crop cannot be replanted because it is too late, which means that Russia will produce very little wheat during the coming year.

The situation is better in the Crimea, but most reliance for the wheat crop was placed in the Ukraine, which always has supplied the bread needs of Russia and produced a surplus for German export. Since the Ukraine suffered a crop failure last year it is presumed the present failure of the winter crop will compel the Soviet Government to buy bread abroad. One of the difficulties of this solution lies in the fact that Russia will have to pay for imported bread in foreign currency, which is expected to have an adverse effect on the value of the Russian ruble.

Urgent measures to reseed the damaged fields are now being taken by the Government, which is supplying the peasants with seeds, on condition that a certain percenage of the crop be sold to the Government in advance under contract. The peasants will receive food and forage relief from the Government during the summer months until the results of the new crop can be estimated.

Making Full Payment

Government Proposes To Meet All Claims Made For Separation Awards

The government proposes to make full payment with interest of all the separation awards made by Commissioner James Pyke, who investigated claims for compensation for losses sustained during the late war.

This was announced in the House of Commons by Hon. Fernand Rinfret, secretary of state. In making the announcement, Mr. Rinfret pointed out that while the Union Government House provided for only two and a half millions, it was proposed to put a further amount in the supplementary estimates to complete the sum required for full payment.

As the law now stands, the bill as amended passed through the committee and was given third reading.

Radio Difficult To Transmit In Forest

Mysterious Barriers Exist Largely When Trees Are Sappy

When radio messages are received with comparative ease in the Arctic, and the long and short waves of electrically energized ether are received in miles deep mountain gorges, it is startling to find that difficulty is encountered in establishing radio communication in the forest. There are mysterious barriers that exist in the forest, the transmission of radio energy being affected to an unknown extent by what is called the absorption of trees. This seems to occur in spring, summer, and fall when the trees are sappy. With all the advances made by radio, there is still necessary for the protectors of our forests to use the telegraph and telephone.

A Strange Cargo

One of the strangest cargoes ever to be shipped on an aeroplane arrived at Croydon airport recently. When the large air freighter pulled up at the hangars, the load inside proved to be twelve monkeys and a baby bear. They were shipped to a private animal dealer in London, from the East Indies, the distance from Amsterdam to Croydon being covered in the air freighter.

Would Cut Expense

A London tailor has demonstrated a reversible coat, which can be worn inside out. Two different cuts of clothes may thus be worn at once, to be changed at will. Both sides are said to look like well tailored garments.

Jones was never an early bird at the office. One morning his boss exclaimed: "Late again. Have you ever done anything on time?"

"Yes, sir," was the meek but prompt reply. "I purchased a car

Minard's Liniment for sick animals.

Danish Dairy Exhibiton

National Show This Year Had Largest Display Ever Held

At the Danish national dairy exhibition held in Copenhagen recently, there were exhibits of butter from no less than 1,367 dairies, and cheese from 743 dairies.

It was the largest display of its kind ever held in Denmark, and it is doubtful whether any other country could have produced such a numerous collection of samples of butter of such uniform quality despite the fact that they were made in so many hundreds of different dairies. Besides butter and cheese the exhibition also comprised condensed milk, export cream, milk powder, ice cream, dairy preparations and dairy machinery.

The quality marks given to the butter by the adjudicators showed a high degree of uniformity. From 90 to 95 per cent. of the butter exhibits were acknowledged as being fully up to the requisite standard, and the cheese exhibits were also characterized by the experts as most satisfactory.

Visitors to the exhibition came from no less than 24 foreign countries.

MADE HER BABY PLUMP AND WELL

Nothing makes a mother more grateful than a benefit conferred upon her child. Mothers everywhere who have used Baby's Own Tablets for their children speak in enthusiastic terms of them. For instance, Mrs. Zepherin Lavoie, Three Rivers, Que., writes:—"Baby's Own Tablets are a wonderful medicine for little ones. They never fail to regulate baby's stomach and bowels and make baby plump and well." You can get a box of the Tablets in the house and would advise all mothers to do so. Baby's Own Tablets banish ailments of childish arise in the stomach and bowels, and all ailments are banished by Baby's Own Tablets. The Tablets relieve constipation and indigestion, break up colds and simple fevers, expel worms, allay teething troubles and promote sound sleep. They are guaranteed to be free from opiates and are absolutely safe even for the youngest and most delicate child. The Tablets are sold by medicine dealers or by mail at 25c a box from The Dr. Williams' Medicine Co., Brockville, Ont.

Little Helps For This Week

"Godliness with contentment is great gain."—1 Timothy vi. 6.

My crown is in my heart, not on my head;
Not decked with diamonds and Indian stones,
Nor to be seen; my crown is called
Content.—Shakespeare.

A contented mind is always joyful; but joy has its root in her religion. The rich and poor alike, having contentment, enjoy perpetual rest.

—Buddha.

I am always contented with that which happens, for I think that what God chooses is better than what I choose.—Epictetus.

Spare the children from suffering from worms by using Miller's Worm Powders, a most effective vermifuge with which to combat these insidious foes of the young and weak. It is an excellent worm destroyer, and when its qualities become known in a household no other will be used. The medicine will be found absolutely no purgative to assist it, and so thoroughly that nothing more is desired.

MOST people rely on Aspirin to make short work of their headaches and colds when they are just as effective in the worse pains from neuralgia or neuritis? Rheumatic pains, too. Don't suffer when Aspirin can bring such complete comfort without delay, and without harm; it does not affect the heart. In every package of Aspirin you will find proven directions with which everyone should be familiar, for they can spare much needless suffering.

To Explore Baffin Land

Donald MacMillan To Head Expedition To Northern Lands

Donald B. MacMillan, explorer in an address has briefly outlined plans for his projected expedition into the Arctic this summer.

The schooner Bowdoin will leave from Wiscasset Harbor, June 22.

The summer will be devoted to exploration of unknown spots in Labrador and Baffin Land. He expects to return in September.

The party will work among the Nascope Indians, whose hostility to white men was overcome on a previous expedition, when they were assisted through a period of famine. Plans include a study of the great ice cap in Baffin Land, of which little is known, Commander MacMillan said.

Might Try It Once

Opening a family Bible, a Minneapolis man found a $100 note seventy-five years old, and still worth its face value. Thus encouraged, I imagine a lot of people will open their family Bibles at least once every seventy-five years, just on a chance.

The Oil For the Athlete.—In rubbing down, the athlete will find Dr. Thomas' Eclectric Oil an excellent article. It renders the muscles and sinews pliable, takes the soreness out of them and strengthens them for strains that may be put upon them. It stands pre-eminent for this purpose, and athletes who, for years, have been using it can testify to its value as a lubricant.

Canada Honey Exports

Of the total honey production in Canada last year of 22,489,906 pounds valued at $2,785,467, 1,246,017 pounds valued at $104,209 were exported. The Netherlands was the biggest buyer, taking 517,370 pounds and the British Isles were next with 319,818 pounds.

Praise For Judicial System Of Canada

Former Rhode Island Judge Speaks Appreciatively Of Administration

Technicalities are not available to the criminal here in Canada, said Hon. Thomas Lee, former Judge of the District Court of the State of Rhode Island, in an interview at the Banff Springs Hotel. Speaking in the most appreciative terms of the administration of justice in Canada, he pointed out that in his country, with 48 different sovereign states each with their own laws, endless confusion arose. In making a comparison of judicial systems, he cited the promptitude with which juries were usually selected in Canada, and added: "I myself have tried a case when a week was consumed, and I know of cases where three weeks were required."

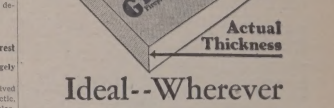
The election of judges by the people is unsatisfactory, in my opinion, he said. "When in California they are elected for a six-year term, they are forced to electioneer while in office, a practice that is not conducive to impartiality. Judge Lee stressed the amicable relation extant in the English-speaking world and predicted an established peace.

"What is your son studying at college, Hiram?"

"Pharmacy."

"Some new fangled farming, eh?"

Love is blind. That's why a man in love is unable to distinguish between an angel and a goose.



Ideal--Wherever alterations are required

IN many a fine, old-fashioned farm house there are rooms much larger than people today consider necessary. This available space can be partitioned off into extra rooms with very little work and at surprisingly small cost by the use of Gyproc Fireproof Wallboard. And the Gyproc walls and ceilings of the new rooms will match the older walls—no matter how solid they are—for seasoned rigidity, good looks and permanence.

Gyproc is the perfect building material for all modern farm construction—for homes, barns, poultry houses, granaries and garages. It is pure rock—cannot warp, shrink or burn. With the use of joint filler and tape its sections meet in a tight, flush joint that insures a flat, smooth surface and takes any decoration.

Sour Stomach

Just a tasteless dose of Phillips' Milk of Magnesia in water. That is all. Quick, effective, yet harmless. It has been the standard antacid for 50 years among physicians everywhere. One spoonful will neutralize at once many times its volume in acid. It is the right way, the quick, pleasant and efficient way to kill the excess acid. The stomach becomes sweet. Its pain departs. You are happy again in five minutes.

Don't depend on crude methods. Employ the best way yet evolved in all the years of searching. That is Phillips' Milk of Magnesia.

Be sure to get the genuine Phillips' Milk of Magnesia prescribed by physicians for 50 years in correcting excess acids. Each bottle contains full directions—any druggist.

VILLAGE OF CRAIGMYLE

Proposed Early Closing By-Law

NOTICE is hereby given that a petition has been presented to the Council of the Village of Craigmyle, under the provisions of "The Early Closing Act," praying for the passing of the following Closing By-Law:

BY-LAW NO. 23

WHEREAS, a Petition dated 29th May, 1929, signed by the occupiers of two-thirds in number of the shops or premises in the Village of Craigmyle to be affected thereby, has been presented to the Council of the Village of Craigmyle praying that a By-Law be passed by that Council under "The Early Closing Act" of the Provinces of Alberta, providing for the closing, and keeping closed for the remainder of the day of certain classes of shops and premises hereinafter specified on the said Village on Wednesday afternoons during the period from 15th May to 15th August in each year:—

NOW THEREFORE THE COUNCIL OF THE VILLAGE OF CRAIGMYLE DULY ASSEMBLED ENACTS AS FOLLOWS:

1. All General Stores, Hardware Stores, Harness Shops, Shoe Repair Shops, Butcher Shops and Lumber Yards in the Village of Craigmyle, shall be closed for business and kept closed for the remainder of the day each Wednesday, not being a Dominion General Holiday, during the period from the 15th day of May to the Fifteenth day of August in each year at Twelve o'clock noon, except the Wednesday of a week during the period in which any other business day is a Dominion General Holiday.

2. Any person, firm or corporation violating any of the provisions of this By-law shall be liable on summary conviction —

(a) For a first offence to a fine not exceeding Five Dollars and costs.

(b) For a second offence to a fine not exceeding Twenty-five Dollars and costs, and

(c) For a third and subsequent offence to a fine not exceeding One Hundred Dollars and costs.

Provided that no person shall be deemed guilty of an offence against this By-Law who serves after the closing hour any customer who was in the shop or premises at such hour.

Done and passed in Council this ..... day of ....., 1929.

NOTICE is hereby further given that objections to the petition presented to the Council praying for the passing of such By-Law on the ground that such petition is insufficiently signed or otherwise affecting the validity or insufficiency thereof, must be filed with D. L. Sloan, Secretary-Treasurer of said Village, on or before the 9th day of July, 1929, and that if no objections are filed before the said date the council will forthwith proceed to pass the said closing By-Law.

WHAT STIMULATES PROGRESS

In legal parlance there is a term, "caveat emptor," which means let the buyer beware." And that does not single out any class of buyers.

There are people in Delia who buy everything at home and from home-town merchants. And there are merchants who buy their advertising from the newspapers and other mediums of their own community.

And there are also people in this community who buy very little here, thoughtlessly spending their money out of town where it is lost to the community. Those who buy here benefit the community by keeping their money in local circulation and reap the additional rewards of buying from business enterprises that depend, for their very existence, upon their reputation for fair dealing.

The home-town merchant gives his patrons and the community the fruits of his industry and his community's patronage.

The same principle which urges people to patronize the local merchant who has his money invested where it serves them most, should impel the merchant to advertise in the papers of his community.

This paper boosts Delia and its people, institutions and business. It is a fixture with a heavy investment and dependent, for its existence as a booster, upon the patronage of the community.

Merchants advertise in newspapers to increase their business. Consumers read newspaper advertisements that they may buy with the least excuse of time and effort, and most advantageously, both in respect to price and quality. Both advertiser and buyer forget that this advertising makes possible the newspaper that brings them the news of the day and provides one of the chief stimulants to community growth and betterment.

While returning from assisting at the fire at Henry Moore's farm, a four-horse team driven by Horace Preece became excited and ran away. Mr. Preece was thrown violently to the ground and the horses ran through a 3-wire fence. Two of the horses were cut by the wire and the plow to which they were hitched was considerably damaged.

* * *

What might have been a very serious fire occurred on Henry Moore's farm south-west of town when the bunkhouse and contents was completely destroyed. Mr. Moore was some distance away when the fire started, and it was only the timely assistance rendered by townspeople and neighbors saved the garage which was partially burned. The fire started presumably from the stove which had recently been lighted.

A joint meeting of the U.F.A. and U.F.W.A. was held in Shatz's Hall on Thursday evg. last, and was largely attended. The purpose of the meeting was to discuss the new School act, popularly known as the Baker scheme. The meeting opened by community singing led up by Mr. A. S. Newcombe Mr. Henry Moore led the discussion, and explained at some length the working of the new act. He was followed by Mr. Gordon Forster, M.L.A., who outlined the scheme already given by Mr. Moore, holding the attention of his audience for some considerable time. He was followed by Mr. Thurber, who also addressed the gathering. At the close of the meeting a number of questions were asked and answered, after which the meeting came to a close.

2nd Fortnightly Crop Report

(Issued by Department of Agriculture, Government of Alberta, Edmonton, May 27, 1929.)

Seeding of wheat has been practically completed over the province and approximately seventy-five per cent of the acreage for oats and barley has been sown, according to telegraphic information received by the Department of Agriculture on Monday. Work has been retarded to some extent in a number of districts in the south, but the remainder of the wheat acreage will be sown within the next few days. Conditions in a number of northern and central districts have been materially improved by rains during the past week, and little concern is felt over general crop prospects from the moisture standpoint. Germination has been uniformly good and much of the early sown wheat is making rapid growth. Warm weather is required to promote continued growth, especially in areas where seeding has been delayed by a heavier than usual precipitation.

The season has been somewhat unfavorable for the early destruction of weeds as growth has been too slow to permit of much eradication by surface cultivation prior to seeding. Some localities report a considerable increase in the acreage of grain stubbled in, and this will undoubtedly be reflected in difficulties experienced in fighting the weed situation in following years.

Best seeding has been practically finished in the south and seed has germinated well. Early acreage to the young plants is reported as a result of late frosts. A marked increase is noted in the acreage devoted to sweet clover, alfalfa and the other pasture crops.

A uniformly good stand of crops is reported in the Peace River district where seeding has been completed for some time. All the wheat is above the ground and oats are making a good growth. The moisture supply in the soil is sufficient to carry the crop for some time and prospects generally are very promising.

Pastures are making satisfactory growth and live stock is in good condition. Shearing of farm flocks is expected to start shortly and under range conditions a start will be made within the next few weeks. Some losses have been experienced in the lamb crop on the range as the result of snow and rain during the lambing season.

Contracts awarded on C.P.R. Extensions

Construction will be started shortly on a number of extensions to Canadian Pacific lines in Alberta according to an announcement made last week by D. C. Coleman, vice-president of western lines. The Lacombe and Northwestern line will be extended from the present terminus at Breton, a distance of twenty miles to Thorsby, from where it will eventually be continued to Leduc. Twenty-five miles of grade will be constructed from Arrowood to Blackie by the Tomlinson Construction Company of Winnipeg, while contracts for the 25-mile grade northeast from Acme and 41 miles of the Coronation-Youngstown line have been awarded to F. Mannix of Calgary. Construction of the 25-mile line from Willingdon to Vegreville, on which work was started last fall, is progressing steadily.

Pool Terminal Storage to be Increased

The Alberta Wheat Pool is continually increasing its elevator system. On Monday of this week the contract was let, more than doubling the storage of the Pool terminal at Vancouver.

The number of Pool elevators in Alberta has been increased until the total is close to the 400 mark.

The Pool's continual objective is to handle as much of its members' wheat as possible through Pool elevators. Each year sees an increase in the volum of Pool wheat handled through Pool facilities. This year the total is around 95 per cent.

The new Vancouver terminal was completed last fall and have storage facilities to handle 2,500,000 bushels of wheat. With the proposed additional storage of 2,750,000 this elevator will have a total capacity of 5,250,000 bushels. This will provide total terminal space owned and controlled by the Alberta Wheat Pool on the Pacific coast of 8,150,000 bushels.

The contract for building the additional storage in Terminal No. 1 was let to Carter, Hall & Aldinger of Winnipeg. C. D. Howe and Company, Port Arthur, are consulting engineers.

Attorney General to Represent Province Overseas

Alberta will be represented by the Attorney General, Hon. J. F. Lymburn, when two cases from this province are heard shortly by the Privy Council in London. In pleading each of these cases, Mr. Lymburn will be associated with special counsel.

Department of Agriculture Testing Chemical Weed Destroyers

It has come to the attention of the Department of Agriculture that certain persons have been recommending to farmers a chemical preparation for the destruction of noxious weeds, and in published statements testifying to the value of the preparation have represented themselves as being connected at the time with the Department.

This creates an impression which should be corrected, and it may be pointed out that the Department accepts no responsibility for statements of this kind from unauthorized sources. Experiments have been carried out by the Field Crops Branch of the Department during the past year to determine the efficiency of the various chemical weed destroyers which are now on the market, and further intensive tests will be conducted this year under the direct supervision of the Field Crops commissioner. At the conclusion of these experiments an official statement of the results showing the comparative value of these chemicals will be issued, and until that time no reports as to the findings of the Department in this connection can be considered as authoritative.

It takes more than mere size to make a BIG Six. It takes more than beauty, more than style, more than performance. True, a car needs all of these before it can become a BIG Six. True, Pontiac Big Six has all these.

But it has something more . . something that stamps it once and forever as a real BIG Six.

It has the "feel" of a BIG Six. People accustomed to much driving will know immediately what that means.

And it's not a sensation you can counterfeit. You have but to sit behind the wheel, drive the car and get the "feel" of it . . you'll know in an instant whether or not you are driving a Big Six.
